K.S.Rangasamy College of Technology

(Autonomous)

CURRICULUM AND SYLLABI

Of

B.Tech. Textile Technology

(For the batch admitted in 2023 - 2024)

R 2022

Courses Accredited by NBA, Accredited by NAAC A++ Grade, Approved by AICTE, Affiliated to Anna University, Chennai.

KSR Kalvi Nagar, Tiruchengode – 637 215. Namakkal District, Tamil Nadu, India.

B.Tech. Textile Technology

VISION OF THE DEPARTMENT

To be the center of excellence in textile education, training, research and service.

MISSION OF THE DEPARTMENT

- To enlighten the students about the latest technology in textile industries through innovative educational practices and a multi-disciplinary approach.
- To engage with the industry as solution providers through consultancy.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- **PEO1:** Production Process and Solutions to Problems: Graduates are competent in textile production processes and be able to identify problems and suggest suitable solutions.
- **PEO2:** Modern Tools & Technology and Ethics: Graduates use latest tools and technology for the production of textile materials and serve society in an ethical manner.
- **PEO3:** Skills, Entrepreneurship and Life Long Learning: Graduates will exhibit skills in their career and develop entrepreneurial culture through life-long learning.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

- PO1: **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2: **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3: **Design /development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4: **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5: **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- PO6: **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7: **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8: **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9: **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

- PO10: **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11: **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12: **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

Engineering Graduates will be able to:

- **PSO1:** Application of Basic Concepts: Apply fundamental concepts in the areas of spinning, weaving, testing, garment making and processing.
- **PSO2:** Solution for Industrial Problems: Solve industrial problems in textile industries considering environmental issues to improve quality and productivity.
- PSO3: Moral Values: Demonstrate social and ethical responsibilities relevant to textile industries.

^{*} CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination and 40 marks for practical End semester Examination.

60 EN 001	PROFESSIONAL ENGLISH I	Category	٦	T	Р	Credit
60 EN 001	PROFESSIONAL ENGLISH I	HS	1	0	2	2

Objectives

- To help learners improve their vocabulary and to enable them to use words appropriately in different academic and professional contexts
- To help learners develop strategies that could be adopted while reading texts
- To help learners acquire the ability to speak effectively in English in real life and career related situations
- To equip students with effective speaking and listening skills in English
- To facilitate learners to enhance their writing skills with coherence and appropriate format effectively

Pre-requisites

• Basic knowledge of reading and writing in English.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and interpret complex academic texts	Understand
CO2	Recall the denotative and connotative meanings of technical texts	Remember
CO3	Interpret definitions, descriptions, narrations, and essays on various topics	Understand
CO4	Express fluently and accurately in formal and informal communicative contexts	Understand
CO5	Summarize their opinions effectively in both oral and written medium of communication	Understand

Course C	Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1.0	Introduction to Fundamentals of Communication	
1.1	Listening for general information and Specific details	1
1.2	Self-introduction	1
1.3	Narrating personal experiences	1
1.4	Reading relevant to technical contexts and emails	1
1.5	Writing letters – informal	1
1.6	Writing letters - formal	1
1.7	Present Tenses	1
1.8	synonyms, antonyms and contranyms, and affixes	1
1.9	phrasal verbs; abbreviations & acronyms	1
2.0	Narration and Summation	
2.1	Listening to podcasts, documentaries and interviews with celebrities	1
2.2	Narrating personal experiences	1
2.3	Summarizing of documentaries	1
2.4	Reading travelogues, and excerpts from literature	1
2.5	Paragraph writing	1
2.6	Short report on an event (field trip etc.).	1
2.7	Past tenses	1
2.8	Prepositions	1
2.9	One-word substitution	1
3.0	Description of a process / product	•
3.1	Listen to a product and process descriptions	1
3.2	Picture description	1
3.3	Giving instruction to use the product	1
3.4	Reading Advertisements, gadget reviews and user manuals	1
3.5	Writing Definitions and instructions	1
3.6	Future Tenses	1
3.7	Homonyms and Homophones	1
3.8	Imperatives	1
3.9	comparative adjectives, and discourse markers	1
4.0	Classification and Recommendations	·
4.1	Listening to TED Talks and educational videos	1
4.2	Listening to scientific lectures	1
4.3	Small Talk and mini presentations	1
4.4	Reading newspaper articles and journal reports	1
4.5	Note-making / Note-taking	1
	Recommendations	-
4.7	Transferring information from non-verbal	1
4.8	Articles and Pronouns	1
	Subject-verb agreement and collocations	-

60 MA 001	MATRICES AND CALCULUS	Category	L	T	Р	Credit
		BS	3	1	0	4

Objectives

- To familiarize the students with basic concepts in Cayley-Hamilton theorem and orthogonal transformation.
- To get exposed to the fundamentals of differential calculus in various methods.
- To acquire skills to understand the concepts involved in Jacobians and maxima and minima.
- To solve various linear differential equations and method of variation of parameters.
- To learn various techniques and methods in solving definite and indefinite integrals.

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

<u> </u>	caccecial completion of the course, etaucitie iiii se able to	
CO1	Apply the concepts of Cayley-hamilton theorem and orthogonal transformation to the matrix	Apply
CO2	Apply the concepts of differentiation in solving various Engineering problems	Apply
CO3	Obtain Jacobians and maxima and minima of functions of two variables	Apply
CO4	Employ various methods in solving differential equations	Apply
CO5	Apply different techniques to evaluate definite and indefinite integrals	Apply

List of Experiments:

PHYSICS LABORATORY

- 1. Determination of Young's modulus of a given material Uniform bending
- 2. Determination of rigidity modulus of a wire -Torsional pendulum.
- 3. Determination of dielectric constant.
- 4. Determination of wavelength of mercury spectral lines spectrometer grating
- 5. (a) Laser- Determination of the wave length of the laser using grating.
- 6. (b) Optical fibre -Determination of Numerical Aperture and acceptance angle.

CHEMISTRY LABORATORY

- 1. Estimation of hardness of water sample by complexometric method.
- 2. Estimation of HCl by pH meter.
- 3. Estimation of mixture of acids by conductivity meter.
- 4. Determination of ferrous ion by Potentiometric titration.
- 5. Adsorption of acetic acid by Charcoal.

Case studies/Activity report

- 1. Prepare a report on hardness of water samples in and around your area and suggest your idea for removal of hardness.
- 2. Apply the knowledge of pH determination for health drinks, beverages, soil, effluent and other biological samples and prepare a case study report

Lab Manual

- 1. "Engineering Physics Lab Manual", Department of Physics, KSRCT.

K.S.RANGASAMY COLLEGE OF TECHNOLOGY, TIRUCHENGODE - 637215

(An Autonomous Institution affiliated to Anna University)

B.E. / B.Tech. Degree Programme

SCHEME OF EXAMINATIONS

(For the candidates admitted in 2023-2024)

SECOND SEMESTER

3.No.	Course Code	Name of the Course	Duration of	Weighta	age of Mar	·ks	Minimum Marks for Pass in End Semester Exam		
			Internal Exam	Continuous Assessment	End Semester Exam **	Max. Marks	End Semester Exam	Total	
			THEORY						
1	60 EN 002	Professional English II	2	40	45	100			
2	60 MA 003	Integrals, Partial Differential Equations and Laplace Transform	2	40	60	100	45	100	
3	60 EE 002	Basic Electrical, Electronics and Instrumentation	2	40	60	100	45	100	
4	60 ME 004	Engineering Mechanics	2	40	60	100	45	100	
5	60 CS 001	C Programming	2	40	60	100	45	100	
6	60 TT 201	Fibre Science	2	40	60	100	45	100	
8	60 GE 002	Tamils and Technology / தமிழரும் தொழில்நுட்ப மும்	2	100	-	100	1	100	
			PRACTICA	L					
9	60 EE 0P2	Basic Electrical, Electronics and Instrumentation Laboratory	3	60	40	100	45	100	
10	60 CS 0P1	C Programming Laboratory	3	60	40	100	45	100	
11	60 CG 0P1	Career Skill Development I	3	100		100	-	100	

^{*} CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination and 40 marks for practical End semester Examination.

60 EN 002	PROFESSIONAL ENGLISH II	Category	L	T	Р	Credit
00 EN 002	PROFESSIONAL ENGLISH II	HS	1	0	2	2

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

Pre-requisites

 Basic knowledge of reading and writing in English and should have completed Professional English I.

Course Outcomes

CO1	Compare and contrast products and ideas in technical texts.	Understand
CO2	Illustrate cause and effects in events, industrial processes through technical texts	Understand
CO3	Infer problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Understand
CO4	Relate events and the processes of technical and industrial nature.	Remember
CO5	Demonstrate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Understand

3. No.	Topics	No. of hour
1	Making Comparisons	•
1.1	Evaluative Listening	1
1.2	Product Descriptions and filling a graphic organiser	1
1.3	Marketing a product by using persuasive techniques	2
1.4	Reading advertisements, user manuals and brochures	1
1.5	Writing professional emails	1
1.6	Compare and contrast essay	1
1.7	mixed tenses and prepositional phrases	1
1.8	Same words used in different contexts	1
2	Expressing Causal Relations in Speaking and Writing	
2.1	Listening to longer technical talks	1
2.2	Listening to process/event descriptions	1
2.3	Describing and discussing the reasons of accidents or disasters	1
2.4	Reading longer technical texts- cause and effect essays	1
2.5	Writing responses to complaints	1
2.6	Active Passive Voice transformations	2
2.7	Infinitive and Gerunds	1
2.8	Word Formation (Noun-Verb-Adj-Adv), Adverbs.	1
3	Problem Solving	<u>, </u>
3.1	Listening to documentaries and suggesting solutions	1
3.2	Group Discussion (based on case studies)	2
3.3	Reading Case Studies, excerpts from literary texts and news reports	1
3.4	Letter to the Editor	1
3.5	Checklists	1
3.6	Problem solution and argumentative essays	1
3.7	Error correction and Sentence Completion	1
3.8	If conditional sentences	1
4	Reporting of Events and Research	
4.1	Listening Comprehension	1
4.2	Interviewing and presenting oral reports	1
4.3	Mini presentations on select topics	1
4.4	Reading newspaper articles	1
4.5	Recommendations	1
4.6	Transcoding	1
4.7	Precis writing, Summarising and Plagiarism	1
4.8	Reported Speech, Modals	1
4.9	Conjunctions	1
5	The Ability to put Ideas or Information Coherently	I .
5.1	Listening to Formal job interviews	1
5.2	Role plays	2
5.3	Virtual interviews	1
5.4	Reading Company profiles	1
5.5	Writing Statement of Purpose (SoPs)	1
5.6	Writing Résumé	1
5.7	Numerical Adjectives and Relative Clauses - Idioms	1
5.8	question types: Wh/ Yes or No/ and Tags	1

60 ME 004	ENGINEEDING MECHANICS	Category	L	Т	Р	Credit
60 ME 004	ENGINEERING MECHANICS	ES	3	1	0	4

This course aims to convey to the student

- To learn a process for analysis of static objects, concepts of force, moment, and mechanical equilibrium in two and three dimensions.
- To learn the equilibrium of rigid bodies such as frames, trusses, beams.
- To identify the properties of surfaces and solids by using different theorem.
- To impart basic concept of dynamics of particles.
- To acquire the concept of friction and elements of rigid body dynamics

Pre-requisites

Nil

Course Outcomes

On the	successful completion of the course, students will be able to	
CO1	Use scalar and vector analytical techniques for analysing forces in statically determinate structures.	Apply
CO2	Apply basic knowledge of scientific concepts to solve real-world problems.	Apply
CO3	Calculate the properties of surfaces and solids using various theorems.	Apply
CO4	Analyse and solve problems on kinematics and kinetics.	Apply
CO5	Analysis of rigid body dynamics and calculation of frictional forces on contact surfaces.	Apply

^{*}SDG 9 - Industry Innovation and Infrastructure

S. No. Topics No. of hours 1 Basics and Statics Of Particles 1.1 Introduction, Units and Dimensions, Laws of Mechanics 1.2 Principle of transmissibility, Lame's theorem, 1.3 Parallelogram and triangular Law of forces 1.4 Tutorial 1.5 Vectors, Vectorial representation of forces and moments 1.6 Vector operations, Coplanar Forces-Resolution and Composition of forces 1.7 Equilibrium of a particle, Forces in space 1.8 Equivalent systems of forces-Single equivalent force. 1.9 Tutorial 2 Equilibrium of Rigid Bodies 2.1 Free body diagram, Types of supports and their reactions 2.2 Requirements of stable equilibrium, Static determinacy 2.3 Moments and Couples-Moment of a force about a point and about an axis 2.4 Vectorial representation of moments and couples 2.5 Tutorial 2.6 Varignon's theorem 2.7 Equilibrium of Rigid bodies in two dimensions 2.8 Tutorial 2.9 Tutorial 2.1 Properties of Surfaces and Solids 3.1 Determination of Areas and Volumes-Centroid 3.2 Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method) 3.3 Tutorial 3.4 Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method) 3.5 Moment of Inertia of plane area (Tesetion, I section, Angle section) 3.6 Parallel axis theorem and perpendicular axis theorem 4 Parallel axis theorem and perpendicular axis theorem 5 Tutorial 5 Properties of Inertia of thin rectangular section. 5 Moment of Inertia of inertia 6 Parallel axis theorem and perpendicular axis theorem 7 Tutorial 7 Polar moment of inertia 8 Mass moment of inertia of thin rectangular section. 9 Tutorial 1 Tutorial 1 Friction & Dynamics of Particles 4.1 Friction & Dynamics of Particles 4.1 Friction & Dynamics of Particles 4.2 Ladder friction 1 Ladder friction 1 Tutorial 4.3 Rolling resistance-Ratio of tension in belt 4.4 Tutorial 4.5 Displacement, Velocity, acceleration and their relationship, Relative motion 1 Anally Impulse and Momentum 1 Inpulse and Momentum	Course Contents and Lecture Schedule								
1.1 Introduction, Units and Dimensions, Laws of Mechanics 1.2 Principle of transmissibility, Lame's theorem, 1.3 Parallelogram and triangular Law of forces 1.4 Tutorial 2.1.5 Vectors, Vectorial representation of forces and moments 1.6 Vector operations, Coplanar Forces-Resolution and Composition of forces 1.7 Equilibrium of a particle, Forces in space 1.8 Equivalent systems of forces-Single equivalent force. 1.9 Tutorial 2 Equivalent systems of forces-Single equivalent force. 1.9 Tutorial 2.1 Free body diagram, Types of supports and their reactions 1.2.2 Requirements of stable equilibrium, Static determinacy 1.3 Moments and Couples-Moment of a force about a point and about an axis 2.4 Vectorial representation of moments and couples 1.5 Tutorial 2.6 Varignon's theorem 2.7 Equilibrium of Rigid bodies in two dimensions 2.8 Tutorial 2.9 Tutorial 2.1 Determination of Areas and Volumes-Centroid 3.1 Determination of Areas and Volumes-Centroid 3.2 Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method) 3.3 Tutorial 3.4 Moment of Inertia of plane area(T section, I section, Angle section) 3.5 Moment of Inertia of plane area(T section, I section, Angle section) 3.6 Parallel axis theorem and perpendicular axis theorem 3.7 Polar moment of inertia 3.8 Mass moment of inertia 3.9 Tutorial 3.1 Tutorial 3.2 Rolling resistance-Ratio of tension in belt 4.1 Frictiona Bynamics of Particles 4.1 Frictional force, Laws of Coloumb friction, Simple contact friction 4.2 Ladder friction 4.3 Rolling resistance-Ratio of tension in belt 4.4 Tutorial 4.5 Displacement, Velocity, acceleration and their relationship, Relative motion 4.6 Projectile motion in horizontal plane 4.7 Newton's law 4.8 Work Energy Equation 4.9 Impulse and Momentum 4.10 Tutorial 5 Elements of Rigid Body Dynamics 5.1 Translation and Rotation of Rigid Bodies		-							
1.2 Principle of transmissibility, Lame's theorem, 1.3 Parallelogram and triangular Law of forces 1.4 Tutorial 2.5 Vectors, Vectorial representation of forces and moments 1.6 Vector operations, Coplanar Forces—Resolution and Composition of forces 2.7 Equilibrium of a particle, Forces in space 1.8 Equivalent systems of forces-Single equivalent force. 1.9 Tutorial 2.0 Equilibrium of Rigid Bodies 2.1 Free body diagram, Types of supports and their reactions 1.2 Requirements of stable equilibrium, Static determinacy 1.2 Requirements of stable equilibrium, Static determinacy 1.2 Vectorial representation of moments and couples 2.4 Vectorial representation of moments and couples 2.5 Tutorial 2.6 Varignon's theorem 2.7 Equilibrium of Rigid bodies in two dimensions 2.8 Tutorial 2.9 Tutorial 2.1 Determination of Areas and Volumes-Centroid 3.1 Determination of Areas and Volumes-Centroid 3.2 Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method) 3.3 Tutorial 3.4 Moment of Inertia of plane area (Rectangle, circle, triangle section) 3.5 Moment of Inertia of plane area(Hollow section) 3.6 Parallel axis theorem and perpendicular axis theorem 3.7 Polar moment of inertia of thin rectangular section. 3.8 Mass moment of inertia of thin rectangular section. 3.9 Tutorial 3.1 Rolling resistance—Ratio of tension in belt 4.1 Friction & Dynamics of Particles 4.1 Friction & Dynamics of Particles 4.2 Ladder friction 4.3 Rolling resistance—Ratio of tension in belt 4.4 Tutorial 4.5 Displacement, Velocity, acceleration and their relationship, Relative motion 4.6 Projectile motion in horizontal plane 4.7 Newton's law 4.8 Work Energy Equation 4.9 Impulse and Momentum 4.10 Tutorial 5 Elements of Rigid Body Dynamics 5.1 Translation and Rotation of Rigid Bodies 5.1 Translation and Rotation of Rigid Bodies	-		T						
1.3 Parallelogram and triangular Law of forces 1.4 Tutorial 2 1.5 Vectors, Vectorial representation of forces and moments 1 1.6 Vector operations, Coplanar Forces-Resolution and Composition of forces 2 1.7 Equilibrium of a particle, Forces in space 1 1.8 Equivalent systems of forces-Single equivalent force. 1 1.9 Tutorial 2 2 Equilibrium of Rigid Bodies 2.1 Free body diagram, Types of supports and their reactions 1 2.2 Requirements of stable equilibrium, Static determinacy 1 2.3 Moments and Couples-Moment of a force about a point and about an axis 2 2.4 Vectorial representation of moments and couples 1 2.5 Tutorial 2 2.6 Varignon's theorem 1 2.7 Equilibrium of Rigid bodies in two dimensions 2 2.8 Tutorial 2 2.8 Tutorial 2 2.9 Properties of Surfaces and Solids 3.1 Determination of Areas and Volumes-Centroid 1 3.1 Determination of Areas and Volumes-Centroid 1 3.2 Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method) 3.3 Tutorial 2 3.4 Moment of Inertia of plane area (Rectangle, circle, triangle section) 1 3.5 Moment of Inertia of plane area(T section, I section, Angle section) 1 3.6 Parallel axis theorem and perpendicular axis theorem 1 3.7 Polar moment of inertia of plane area(Hollow section) 1 3.8 Mass moment of inertia of thin rectangular section 1 3.9 Tutorial 2 4 Friction & Dynamics of Particles 1 4.1 Frictional force, Laws of Coloumb friction, Simple contact friction 1 4.2 Ladder friction 1 4.3 Rolling resistance—Ratio of tension in belt 1 4.4 Tutorial 2 4.5 Displacement, Velocity, acceleration and their relationship, Relative motion 1 4.7 Newton's law 1 4.8 Work Energy Equation 1 4.9 Impulse and Momentum 1 4.10 Tutorial 2 5 Elements of Rigid Body Dynamics 5 5.1 Translation and Rotation of Rigid Bodies 1			1						
1.4 Tutorial 1.5 Vectors, Vectorial representation of forces and moments 1.6 Vector operations, Coplanar Forces-Resolution and Composition of forces 2.7 Equilibrium of a particle, Forces in space 1.8 Equivalent systems of forces-Single equivalent force. 1.9 Tutorial 2.0 Equilibrium of Rigid Bodies 2.1 Free body diagram, Types of supports and their reactions 1.0 Requirements of stable equilibrium, Static determinacy 1.0 Moments and Couples-Moment of a force about a point and about an axis 1.0 Vectorial representation of moments and couples 1.0 Tutorial 1.1 Tutorial 1.2 Equilibrium of Rigid bodies in two dimensions 1.2 Moment of Inertia of Palane area (Rectangle, circle, triangle using Integration Method) 1.3 Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method) 1.3 Moment of Inertia of plane area(T section, I section, Angle section) 1.4 Moment of Inertia of plane area(T section, I section, Angle section) 1.5 Moment of Inertia of plane area(Hollow section) 1.6 Parallel axis theorem and perpendicular axis theorem 1.7 Polar moment of inertia of thin rectangular section. 1.8 Mass moment of inertia of thin rectangular section. 1.9 Tutorial 1.0 Friction & Dynamics of Particles 1.1 Friction & Dynamics of Particles 1.2 Friction & Dynamics of Particles 1.3 Rolling resistance—Ratio of tension in belt 1.4 Tutorial 1.5 Displacement, Velocity, acceleration and their relationship, Relative motion 1.6 Projectile motion in horizontal plane 1.7 Newton's law 1.8 Work Energy Equation 1.9 Impulse and Momentum 1.1 Tutorial 1.9 Impulse and Momentum 1.1 Tutorial 1.0 Tutorial 1.1 Tutorial 1.1 Tutorial 1.1 Tutorial 1.2 Elements of Rigid Body Dynamics 1.1 Translation and Rotation of Rigid Bodies			1						
1.5 Vectors, Vectorial representation of forces and moments 1.6 Vector operations, Coplanar Forces-Resolution and Composition of forces 2.1.7 Equilibrium of a particle, Forces in space 1.8 Equivalent systems of forces-Single equivalent force. 1.9 Tutorial 2.1 Free body diagram, Types of supports and their reactions 2.1 Free body diagram, Types of supports and their reactions 1.2.2 Requirements of stable equilibrium, Static determinacy 1.3 Moments and Couples-Moment of a force about a point and about an axis 2.4 Vectorial representation of moments and couples 1.5 Tutorial 2.6 Varignon's theorem 2.7 Equilibrium of Rigid bodies in two dimensions 2.8 Tutorial 2.9 Tutorial 2.9 Tutorial 2.1 Determination of Areas and Volumes-Centroid 3.1 Determination of Areas and Volumes-Centroid 3.2 Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method) 3.3 Tutorial 3.4 Moment of Inertia of plane area (Rectangle, circle, triangle section) 3.5 Moment of Inertia of plane area (Hollow section) 3.6 Parallel axis theorem and perpendicular axis theorem 1 3.7 Polar moment of inertia 3.8 Mass moment of inertia of thin rectangular section. 3.9 Tutorial 3.1 Rectangle and perpendicular axis theorem 4.1 Friction & Dynamics of Particles 4.1 Frictional force, Laws of Coloumb friction, Simple contact friction 4.2 Ladder friction 4.3 Rolling resistance–Ratio of tension in belt 4.4 Tutorial 4.5 Displacement, Velocity, acceleration and their relationship, Relative motion 4.6 Projectile motion in horizontal plane 4.7 Newton's law 4.8 Work Energy Equation 4.9 Impulse and Momentum 4.10 Tutorial 5.1 Translation and Rotation of Rigid Bodies 5.1 Translation and Rotation of Rigid Bodies			-						
1.6 Vector operations, Coplanar Forces—Resolution and Composition of forces 1.7 Equilibrium of a particle, Forces in space 1.8 Equivalent systems of forces-Single equivalent force. 1.9 Tutorial 2 Equilibrium of Rigid Bodies 2.1 Free body diagram, Types of supports and their reactions 1.2.2 Requirements of stable equilibrium, Static determinacy 1.3 Moments and Couples—Moment of a force about a point and about an axis 2.4 Vectorial representation of moments and couples 1.0 Vectorial representation of moments and couples 2.1 Tutorial 2.2 Equilibrium of Rigid bodies in two dimensions 2.3 Tutorial 2.5 Tutorial 2.6 Varignon's theorem 2.7 Equilibrium of Rigid bodies in two dimensions 2.8 Tutorial 2.9 Properties of Surfaces and Solids 3.1 Determination of Areas and Volumes-Centroid 3.2 Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method) 3.3 Tutorial 3.4 Moment of Inertia of plane area(T section, I section, Angle section) 3.5 Moment of Inertia of plane area(Hollow section) 3.6 Parallel axis theorem and perpendicular axis theorem 1 Polar moment of inertia 3.8 Mass moment of inertia of thin rectangular section. 3.9 Tutorial 3.9 Tutorial 3.1 Friction & Dynamics of Particles 4.1 Friction & Dynamics of Particles 4.2 Ladder friction 4.3 Rolling resistance—Ratio of tension in belt 4.4 Tutorial 4.5 Displacement, Velocity, acceleration and their relationship, Relative motion 4.6 Projectile motion in horizontal plane 4.7 Newton's law 4.8 Work Energy Equation 4.9 Impulse and Momentum 4.10 Tutorial 5.1 Translation and Rotation of Rigid Bodies 5.1 Translation and Rotation of Rigid Bodies			2						
1.7 Equilibrium of a particle, Forces in space 1 1.8 Equivalent systems of forces-Single equivalent force. 1 1.9 Tutorial 2 2 Equilibrium of Rigid Bodies 1 2.1 Free body diagram, Types of supports and their reactions 1 2.2 Requirements of stable equilibrium, Static determinacy 1 2.3 Moments and Couples-Moment of a force about a point and about an axis 2 2.4 Vectorial representation of moments and couples 1 2.5 Tutorial 2 2.6 Varignon's theorem 1 2.7 Equilibrium of Rigid bodies in two dimensions 2 2.8 Tutorial 2 3 Properties of Surfaces and Solids 2 3.1 Determination of Areas and Volumes-Centroid 1 3.2 Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method) 2 3.3 Tutorial 2 3.4 Moment of Inertia of plane area(T section, I section, Angle section) 1 3.5 Moment of Inertia of plane area(Hollow section) 1 3.6 Parallel axis theorem and perpendicular axis theorem 1 3.7 Polar moment of inertia 1 3.8 Mass moment of inertia of thin rectangular section. 1 3.9 Tutorial 2 4 Friction & Dynamics of Particles 1 4.1 Frictional force, Laws of Coloumb friction, Simple contact friction 1 4.2 Ladder friction 1 4.3 Rolling resistance—Ratio of tension in belt 1 4.4 Tutorial 2 4.5 Displacement, Velocity, acceleration and their relationship, Relative motion 1 4.6 Projectile motion in horizontal plane 1 4.7 Newton's law 1 4.8 Work Energy Equation 1 4.9 Impulse and Momentum 1 4.10 Tutorial 2 5 Elements of Rigid Body Dynamics 5 5.1 Translation and Rotation of Rigid Bodies 1		•	-						
1.8 Equivalent systems of forces-Single equivalent force. 1.9 Tutorial 2 Equilibrium of Rigid Bodies 2.1 Free body diagram, Types of supports and their reactions 2.2 Requirements of stable equilibrium, Static determinacy 3 Moments and Couples—Moment of a force about a point and about an axis 2 Vectorial representation of moments and couples 4 Vectorial representation of moments and couples 5 Tutorial 2 Equilibrium of Rigid bodies in two dimensions 2 Equilibrium of Rigid bodies in two dimensions 2 Tutorial 3 Properties of Surfaces and Solids 3.1 Determination of Areas and Volumes-Centroid 3.2 Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method) 3.3 Tutorial 2 Moment of Inertia of plane area(T section, I section, Angle section) 3.5 Moment of Inertia of plane area(Hollow section) 3.6 Parallel axis theorem and perpendicular axis theorem 1 Answoment of inertia of thin rectangular section. 3.9 Tutorial 3.9 Tutorial 3.10 Tutorial 3.10 Polar moment of inertia of thin rectangular section. 3.11 Polar moment of inertia of thin rectangular section. 3.12 Polar moment of inertia of thin rectangular section. 3.13 Polar moment of inertia of thin rectangular section. 3.14 Frictiona Boynamics of Particles 4.15 Frictional force, Laws of Coloumb friction, Simple contact friction 4.16 Projectile motion in horizontal plane 4.17 Newton's law 4.18 Work Energy Equation 4.19 Impulse and Momentum 4.10 Tutorial 4.29 Lements of Rigid Body Dynamics 5.10 Translation and Rotation of Rigid Bodies 5.11 Translation and Rotation of Rigid Bodies		·	2						
Tutorial 2 Equilibrium of Rigid Bodies 2.1 Free body diagram, Types of supports and their reactions 2.2 Requirements of stable equilibrium, Static determinacy 3. Moments and Couples—Moment of a force about a point and about an axis 2.4 Vectorial representation of moments and couples 3. Tutorial 3. Tutorial 3. Tutorial 3. Properties of Surfaces and Solids 3.1 Determination of Areas and Volumes-Centroid 3.2 Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method) 3.3 Tutorial 3.4 Moment of Inertia of plane area (Rectangle, circle, triangle section) 3.5 Moment of Inertia of plane area (T section, I section, Angle section) 3.6 Parallel axis theorem and perpendicular axis theorem 4. 60 CS 001	C PROGRAMMING	Category	L	Т	Р	Credit
00 C3 001	CPROGRAMMIM	ES	3	0	0	3

- To learn most fundamental element of the C language and to examine the execution of branching, looping statements,
- To examine the concepts of arrays, its characteristics and types and strings.
- To understand the concept of functions, pointers and the techniques of putting them to use
- To apply the knowledge of structures and unions to solve basic problems in C language
- To enhance the knowledge in file handling functions for storage and retrieval of data

Pre-requisites

Nil

Course Outcomes

CO1	Construct the fundamental building blocks of structured Programming in C	Apply
CO2	Implement the different operations on arrays and strings	Apply
CO3	Develop simple real world applications utilizing functions, recursion and pointers.	Apply
CO4	Demonstrate the concepts of structures, unions, user defined data types and preprocessor	Apply
CO5	Interpret the file concepts using proper standard library functions for a given application	Apply

^{*}SDG:4- Quality Education

Cours	ourse Contents and Lecture Schedule								
S.	Tonico	No. of hours							
No.	Topics	NO. OI HOUIS							
1	Basics of C, I/O, Branching and Loops								
1.1	Structure of a C Program, Keywords	1							
1.2	Data types, Type Qualifiers	1							
1.3	Variables and Constants	1							
1.4	Operators–expressions and precedence	1							
1.5	Console I/O Unformatted and Formatted Console I/O	1							
1.6	Conditional Branching	1							
1.7	Iteration and loops	2							
1.8	Writing and evaluation of conditionals and consequent branching	1							
2	Arrays and Strings								
2.1	One Dimensional Array	1							
2.2	Two-Dimensional Array and Matrix Manipulation	1							
2.3	Character arrays and Strings Basics	1							
2.4	String Manipulation without String Handling Functions	2							
2.5	String Manipulation with String Handling Functions	2							
3	Functions and Pointers								
3.1	Scope of a Function – Library Functions, User defined functions and Function Prototypes	1							
3.2	Function Call by value and Function Call by reference, Function Categorization	2							
3.3	Arguments to main function	1							
3.4	Recursion and application	1							
3.5	Passing Arrays to Functions	1							
3.6	Storage class Specifiers	1							
3.7	Introduction to Pointer Variables - The Pointer Operators - Pointer Expressions	1							
3.8	Pointers and Arrays - Generating a Pointer to an Array - Indexing Pointers	1							
3.9	Function and pointers	1							
3.10	Dynamic memory allocation	1							
4	Structures, Unions, Enumerations, Typedef and Preprocessors								
4.1	Introduction to Structures and Initialization	1							
4.2	Arrays and Structures, Arrays of Structures	1							
4.3	Structures within Structures, Passing Structures to Functions	2							
4.4	Structure Pointers	1							
4.5	Unions and Bit Fields.	1							
4.6	Enumerations - typedef	1							
4.7	Preprocessor commands	2							
5	File Handling								
5.1	File Streams –Reading and Writing Characters - Reading and Writing Strings	2							
5.2	File System functions and File Manipulation	2							
5.3	Sequential access	2							
5.4	Random Access Files	2							
5.5	Command Line arguments and files	1

60 TT 201	FIBRE SCIENCE	Category	L	Т	Р	Credit
00 11 201	FIBRE SCIENCE	PC	3	0	0	3

- To study the basics of production of natural and regenerated fibers
- To impart knowledge on applications and properties of natural fibres
- To familiarize on the applications and properties of regenerated fibres
- To recall on the applications and properties of protein fibres
- To study the analysis of various fibres

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Classify the textile fibres and its properties	Understand
CO2	Cultivation / extraction process, properties and applications of Natural cellulosic fibres and their structure.	Understand
CO3	Manufacturing, properties and applications of regenerated cellulosic fibres and their structure.	Apply
CO4	Production, properties and applications of protein and other regenerated fibres with their structure and applications of high performance fibres.	Apply
CO5	Identification of various fibres and blend proportion by various methods.	Apply

Course	Course Contents and Lecture Schedule							
S.No	Topic	No. of						
	-	Hours						
	INTRODUCTION							
1.1	Definition - staple fibre, filament	1						
1.2	classification of textile fibres	1						
1.3	High performance fibres Essential and desirable properties of fibre	1						
1.4	Requirements of fibre forming polymers. Types of polymers	1						
1.5	Intra polymer bonding, inter polymer forces of attraction	1						
1.6	Degree of polymerization, glass transition temperature	1						
1.7	Principle of manmade spinning systems – Dry, Wet	1						
1.8	Melt and Gel spinning	2						
	NATURAL CELLULOSIC FIBRES							
2.1	Cultivation, properties and applications of cotton	1						
2.2	Brief study about BT, coloured and organic cotton	2						
2.3	Extraction, properties and application of flax, jute	1						
2.4	Extraction, properties and application of ramie, hemp	1						
2.5	Extraction, properties and application of sisal, coir	1						
2.6	Extraction, properties and application of banana and pine apple fibres	1						
2.7	Morphological and chemical structure of natural cellulosic fibres	2						
3.0	REGENERATED CELLULOSIC FIBRES							
3.1	Production, properties and applications of viscose rayon,	2						
	cuprammonium rayon							
3.2	Production, properties and applications of acetate rayon, bamboo	2						
	Production, properties and applications of modal and lyocell fibres	2						
3.4	Study of morphological regenerated cellulosic fibres	2						
3.5	Study of chemical structures of regenerated cellulosic fibres	1						
4.0	PROTEIN AND OTHER REGENERATED FIBRES							
4.1	Morphological structure and chemical constitution of wool	2						
4.2	Morphological structure and chemical constitution of silk	2						
4.3	Types, production, properties and applications of wool, silk	1						
4.4	Types, production, properties and applications of soya bean, casein	1						
4.5	Types, production, properties and applications of alginate, chitin	1						
4.6	Types, production, properties and applications of chitosan fibres	1						
4.7	Study on spider silk	1						
5.0	IDENTIFICATION OF FIBRES							
5.1	Fibre identification – microscope, chemical	1						
5.2	Fibre identification – burning, feeling	1						
5.3	Fibre identification –staining, density measurement methods	1						
5.4	Determination of blend proportion	2						
5.5	Determination of moisture content	2						
5.6	Determination of moisture regain	2

- தமிழர்களின் சங்ககால நெசவு, பானை வனைதல் குறித்து அறிதல்.
- தமிழர்களின் கட்டிடத் தொழில் நுட்பம் குறித்து அறிதல்.
- தமிழர்களின் உற்பத்தி முறைகள் குறித்து அறிதல்.
- தமிழர்களின் சங்ககால வேளாண்மை, நீர்ப்பாசனம் குறித்து கற்றல்.
- நவீன அறிவியல் தமிழ் மற்றும் கணித்தமிழ் குறித்த புரிதல்

Pre-requisites

• தேவை இல்லை

Course Outcomes

On the successful completion of the course, students will be able to

CO1	சங்ககாலத் தமிழர்களின் நெசவு மற்றும் பானை வனைதல் தொழில்நுட்பம் குறித்த கற்றுணர்தல்.	புரிதல்
CO2	சங்ககாலத் தமிழர்களின் கட்டிட தொழில்நுட்பம் கட்டுமானப் பொருட்கள் மற்றும் அவற்றை விளக்கும் தளங்கள் குறித்த அறிவு.	புரிதல்
CO3	சங்ககாலத் தமிழர்களின் உலோகத் தொழில் நாணயங்கள் மற்றும் மணிகள் சார்ந்த தொல்லியல் சான்றுகள் பற்றிய அறிவு.	புரிதல்
CO4	சங்ககாலத் தமிழர்களின் வேளாண்மை, நீர்ப்பாசன முறைகள் மற்றும் முத்து குளித்தல் குறித்த தெளிவு.	புரிதல்
CO5	நவீன அறிவியல் தமிழ் மற்றும் கணித்தமிழ் குறித்த புரிந்துகொள்ளலும் மற்றும் பயன்படுத்துதலும்.	புரிதல்,

60 CS 0P1	C PROGRAMMINING LABORATORY	ES	0	0	4	2

- To enable the students to apply the concepts of C to solve simple problems
- To use selection and iterative statements in C programs
- To apply the knowledge of library functions in C programming
- To implement the concepts of arrays, functions, structures and pointers in C
- To implement the file handling operations through C

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Implement computational problems using selection and iterative statements	Apply
CO2	Demonstrate C program to manage collection of related data.	Apply
CO3	Design and Implement different ways of passing arguments to functions, Recursion and implement pointers concepts.	Apply
CO4	Develop a C program to manage collection of different data using structures, Union, user-defined data types and preprocessor directives.	Apply
CO5	Demonstrate C program to store and retrieve data using file concepts.	Apply

60 ME 008	Elements of Mechanical Engineering	Category	L	Т	Р	Credit
		ES	3	1	0	4

- Learn the basic components and layout of linkages in the assembly of a system machine.
- Gain basic knowledge of the strength of materials and power transmissions essential for understanding textile machinery.
- Highlight basic properties of steam and functions of steam boilers used in textile industries.
- Understand the basic functions of pumps and hydraulic devices used in textile industry processes.
- Utilize various air compressors, clutches, and brakes used in automobiles

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Design and construct the various cam profile and follower using various follower motions.	Analyse
CO2	Describe the concepts of stresses and strains, their significant effects in engineering applications.	Analyse
CO3	Select and design the appropriate power transmission drives for various requirements	Analyse
CO4	Explain the properties of steam and different kind of steam boilers.	Apply
CO5	Explain the working principles of pumps, hydraulic devices, air compressors, clutches and brakes.	Apply

^{*}SDG 12: Responsible Consumption and Production

Course	Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1.0	Structural Investigation of Fibres	
1.1	Basic requirements for fibre formation	1
1.2	Fringed micelle Model	1
1.3	Fringed Fibril Model	1
1.4	Fringed lamellar Model	1
1.5	X-Ray Diffraction metho	1
1.6	SEM	1
1.7	TEM	1
1.8	STEM	1
1.9	FTIR NMR	1
	Tutorial	3
2.0	Moisture Absorption Properties of Fibres	
2.1	Definitions- humidity, relative humidity, standard testing atmosphere	1
2.2	Moisture content and regain; hysteresis in moisture absorption	2
2.3	Moisture absorption behavior of textile fibres	1
2.4	Influence of various factors on regain	1
2.5	Absorption in crystalline and amorphous regions	1
2.6	Density gradient column	1
2.7	Heats of sorption-Integral and differential	1
2.8	Measurement, effects of heats of sorption & Factors influencing the rate of conditioning	1
2.9	Conditioning of fibres and Mechanism of conditioning & Swelling of fibres, types of swelling and its measurement.	1
	Tutorial	4
3.0	Mechanical Properties of Fibres	
3.1	Definitions related to tensile property;	1
3.2	Stress strain curves of various textile fibres and its importance	2
3.3	Influence of moisture and temperature on tensile characteristics	1
3.4	Weak- link effect	1
3.5	Introduction to dynamic mechanical properties.	1
3.4	Elastic recovery and its relation to stress and strain of various textile fibres	2
3.5	Mechanical conditioning of fibres	1
3.6	Time dependent effects- creep and stress relaxation phenomena	2
3.7	Brief study on flexural and torsional rigidity of fibres.	2
3.8	Compression and shear properties	1
	Tutorial	3
4.0	Optical and Frictional Properties of Fibres	
4.1	Optical property - Refractive index and its measurement	2
4.2	Birefringence and its measurement	2
4.3	Absorption and dichroism	1
4.4	Reflection and lustre of fibres	2
4.5	Amonton's and Bowden's law of friction	1
4.6	Various influencing factors- load, area of contact, speed of sliding, state of surface and regain	2

4.7	Directional frictional effect of wool.	2
	Tutorial	3
5.0	Thermal and Electrical Properties of Fibres	
5.1	Thermal property- structural changes in fibres on heating	1
5.2	Thermal transitions and melting	2
5.3	Heat setting of fibres and its importance	1
5.4	Electrical property- mass specific resistance	2
5.5	Influence of moisture, temperature and impurities on resistance	2
5.6	Dielectric properties-factors influencing dielectric properties	2
5.7	Static electricity – Theory of static charge generation.	1
5.8	Problems and elimination techniques for Static Electricity	1
	Tutorial	3

60 TT 302	Yarn Manufacturing Technology I	PC	3	0	0	3

- To understand the criterion for selection of Cotton thro openers and cleaners
- To learn about the functions, operations and setting of spinning machines
- To evaluate the end product of each machine in terms of feed parameters of successive machine
- To select the process parameters in relation to feed material
- To understand the need and scope of modern developments in spinning machines

Pre-requisites

60 TT 201 60 TT 301

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain the objectives, principles, and working of ginning and blow room process and carry out production calculations.	Understand
CO2	Describe the objective, principle and working of carding machine, process parameters and production calculations.	Understand
CO3	Explain the principle, objectives and process of drawing and carryout production calculations	Understand
CO4	Describe the need for combing preparatory and working of comber machine, process parameters and production calculations.	Understand
CO5	Explain the objective, principle and working of speed frame and carryout draft, twist and production calculations.	Understand

List of Experiments:

- 1. Identification of fibres by feel and microscopic view.*
 - Natural cellulose & protein fibres
 - Regenerated cellulose fibres
 - Polyamide fibres & Polyester fibres
- 2. Identification of fibres by flaming characteristics (Burning test).*
 - Natural cellulose & protein fibres
 - Regenerated cellulose fibres
 - Polyamide fibres & Polyester fibres
- 3. Identification of fibers by solubility tests.*
 - Natural cellulose & protein fibres
 - Regenerated cellulose fibres
 - Polyamide fibres & Polyester fibres
- 4. Determination of fibre maturity using caustic soda swelling method.*
- 5. Determination of wax content of the cotton fibres*.
- 6. Determination of denier of synthetic fibres by gravimetric method.*
- 7. Determination of density of various fibres by density gradient column*.
- 8. Determination of moisture regain and moisture content of fibers.*
- 9. Estimation of percentage of spin finishes in synthetic fibers through Soxhlet extraction.*
- 10. Determination of blend proportion of P/C blends by solubility method.*
- 11. Determination of blend proportion of C/V blends by solubility method.*
- 12. Determination of blend proportion of P/V blends by solubility method.*
- 13. Determination of blend proportion of P/W blends by solubility method.*

Design Experiments:

- 14. Thermo gravimetric analysis of fibres using thermo grams.*
- 15. FTIR analysis of polymers and fibres from spectrum

	Laboratory I	PC	0	0	4	2	

- To provide the knowledge of basic machineries of Blow room
- To understand the principles involved in processing fibers thro Carding
- To analyze the process of Drawing
- To provide the knowledge about Speed frame process.
- To provide the knowledge for selection machinery with respect to the material

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

On the sa	ecessial completion of the coarse, stadents will be able to	
CO1	Explain the ginning machine's material passage and carryout speed calculations	Apply
CO2	Discuss the material passage through blow room and carryout its production calculations	Apply
CO3	Explain the material passage in carding, assess the setting between various parts and carryout speed, draft and production calculations.	Apply
CO4	Discuss the material passage through draw frame and carryout its production calculations	Apply
CO5	Explain the material passage in speed frame and carryout speed, draft, twist and production calculations.	Apply

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

Pre-requisites

Basic knowledge of reading and writing in English.

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Compare and contrast products and ideas in technical texts.	Analyse
CO2	Identify cause and effects in events, industrial processes through technical texts	Analyse
CO3	Analyse problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Analyse
CO4	Report events and the processes of technical and industrial nature.	Apply
CO5	Articulate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Apply

^{*}CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination, 50 marks for theory cum practical End Semester Examination and 40 marks for practical End semester Examination.

60 MA 022	ADDI IED STATISTICS	Category	L	Т	Р	Credit
60 MA 022	APPLIED STATISTICS	BS	3	1	0	4

- To get exposed to the basics of probability and distributions.
- To familiarize various methods in hypothesis testing.
- To learn basics of correlation, regression and control charts.
- To get exposed to the fundamentals of analysis of variance.
- To construct an appropriate model using time series approach.

Pre-requisites

NIL

Course Outcomes

CO1	Apply the basics of probability and distributions in engineering problems.	Apply
CO2	Compute measures of central tendency and measures of dispersion, and apply various methods to test the statistical hypothesis.	Apply
CO3	Calculate correlation and apply control charts for decision making	Apply
CO4	Apply the concepts of ANOVA to test the equality of means for more than two populations.	Apply
CO5	Apply suitable method to measure the trend values.	Apply

60 TT 402	Fabric Manufacturing Technology II	PC	3	0	0	3

- To impart basic knowledge in the concepts involved in various mechanisms used in weaving
- To train on the aspects of different mechanisms in loom.
- To educate on the features of jacquard, dobby and drop box mechanism.
- To make the students understand the selection and control of process variables during fabric formation
- To give the knowledge about the different shuttle less looms.

Pre-requisites

Fabric Manufacturing Technology I

Course Outcomes

CO1	Explain the functioning of weaving machine and its parts.	Understand
CO2	Comprehend the various types of shedding mechanism and its requirements.	Remember
CO3	Knowledge on primary and secondary motions of weaving machines.	Understand
CO4	Acquire the knowledge of Auxiliary motion, drop box and terry mechanism.	Remember
CO5	Describe requirements and weft insertion principles of different shuttle less looms.	Apply

60 TT402	Toytile Chemical Bracessing I	Category	L	Т	Р	Credit
60 TT403	Textile Chemical Processing I	PC	2	0	2	3

- To impart technical knowledge on desizing and scouring process.
- To impart technical knowledge on bleaching and mercerizing process.
- To impart technical knowledge on cellulosic material dyeing process.
- To impart technical knowledge on synthetic material dyeing process.
- To impart knowledge on the construction and working principles of wet processing and machineries.

Pre-requisites

Course Outcomes

CO1	Explain the wet process sequences for various fabrics and summarize the pretreatment processes and their efficiency for cotton, wool and silk material.	Analyse						
CO2	Describe the objectives and types of bleaching and mercerization of different materials also evaluate their efficiency and select suitable chemicals and other auxiliaries.	Analyse						
CO3	Explain the classification and applications of various dyes and analyze their fastness properties.	Apply						
CO4	Summarize the principle of dyeing of synthetic fibres with various techniques.	Apply						
CO5	Demonstrate the working principles involved in preparatory and dyeing machineries.	Apply

60 MV 002	HANVEDOAL LIHMAN VALUES	Category	L	T	Р	Credit
60 MY 002	UNIVERSAL HUMAN VALUES	PC	3	0	0	3

- To identify the essential complementarily between 'values' and 'skills'
- To ensure core aspirations of all human beings.
- To acquire ethical human conduct, trustful and mutually fulfilling human behaviour
- To enrich interaction with Nature
- To achieve holistic perspective towards life and profession

Pre-requisites

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Understand the significance of value inputs in formal education and start applying them in their life and profession	Understand
CO2	Evaluate coexistence of the "I" with the body.	Analyse
CO3	Identify and evaluate the role of harmony in family, society and universal order.	Analyse
CO4	Classify and associate the holistic perception of harmony at all levels of existence and Nature	Analyse
CO5	Develop appropriate human conduct and management patterns to create harmony in professional and personal lives.	Apply

List of Experiments:

- 1. Passage of material through ring frame, production of yarn and testing of yarn count.
- 2. Different settings in ring frame and selection of rings and travellers for different counts.
- 3. Calculation of Draft and production in ring frame.
- 4. Calculation of Twist and production in ring frame.*
- 5. Study of builder mechanism in ring frame.*
- 6. Passage of material through Rotor spinning machine.*
- 7. Calculation of Rotor spinning production of yarn and testing of yarn count.
- 8. Calculation of Twist in Rotor spinning machine.*
- 9. Passage of material through ring doubling machine, production of yarn and testing of yarn count. Process sequence for production of sewing threads.*
- 10. Passage of material through Two-For-One twister (TFO), production of ply yarn and measurement of ply yarn count. Calculation of twist in TFO.*
- 11. Production and quality characterization of two-fold yarns.*

Design Experiments:

- 12. Production of fancy yarns using fancy doublers.*
- 13. Passage of material through Doubler Winding, production of ply yarn and measurement of ply yarn count

60 11 4P2	Laboratory	PC	0	0	4	2

- To develop skills in the operation and maintenance of weaving preparatory machines.
- To develop practical knowledge of dismantling, assembling and setting of basic weaving mechanisms.
- To prepare the pattern card for a given design.
- To develop the design using drop box mechanism.
- To know about the working principles of circular weft knitting machine.

Pre-requisites

• Fabric Manufacturing Technology II

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Set the optimum process variables and carry out winding using supply package winding machine and calculate the production.	Understand
CO2	Practice dismantling, assembling and setting of primary motions.	Apply
CO3	Perform dismantling, assembling and setting of secondary motions.	Apply
CO4	Perform dismantling, assembling and setting of auxiliary motions.	Apply
CO5	Comprehend the production in circular weft knitting machine.	Analyse

List of Experiments:

- Passage of material through the cone winding machine. Setting of tensioners and slub catchers in cone winding machine. Calculation of drum speed, traverse speed, production in cone winding machine.*
- 2. Passage of material through the pirn winding machine. Calculation of production in pirn winding machine.
- 3. Passage of material through sectional warping machine.
- 4. Dismantling and assembling of tappet shedding mechanism in plain power loom.
- 5. Dismantling and assembling of cone over pick mechanism and study the adjustment of picking force. **
- 6. Dismantling and assembling of cone under pick mechanism and study the adjustment of picking force.
- 7. Dismantling and assembling of beat -up mechanism and calculation of sley eccentricity.
- 8. Dismantling and assembling of negative let-off mechanism and adjustment of warp tension.
- 9. Dismantling and assembling of seven wheel take-up mechanism and calculation of dividend.
- Dismantling and assembling of five wheel take-up mechanism and calculation of dividend.
- 11. Dismantling and assembling of warp & weft stop motion.

Design Experiments

- 12. Designing of pegging plan on wooden lags and preparation of punched card for 4x4 drop box mechanism for a given design.
- 13. Develop a Material passage and production calculation for single jersey / rib weft knitting machine.

Lab Manual

60 CG 0P3	CAREER SKILL DEVELOPMENT III	CG	0	0	2	1*

- To help learners improve their logical reasoning skills at different academic and professional contexts.
- To help learners relate basic quantitative problems and solve them.
- To help learners Infer critically the statements with optimal conclusions and assumptions.
- To Solve the quantitative problems pertaining to calculations of averages, ratio and proportions, and profit and loss effectively
- To compute quantitative problems related to time and work, speed and distance, and simple and compound interest

Pre-requisites

Basic knowledge of Arithmetic and Logical Reasoning

Course Outcomes

CO1	Deduce the topics in logical reasoning at the preliminary and intermediate level.	Analyse
CO2	Relate basic quantitative problems and solve them effectively at the preliminary level	Apply
CO3	Infer critically the statements with optimal conclusions and assumptions with the data and information given.	Analyse
CO4	Solve the quantitative problems pertaining to calculations of averages, ratio and proportions, and profit and loss effectively at the pre-intermediate level.	Apply
CO5	Compute quantitative problems related to time and work, speed and distance, and simple and compound interest at intermediate level.	Apply

- To comprehend the basics of advanced spinning technology
- To know various methods of manufacturing high performance fibres
- To acquire knowledge on their applications in various fields
- To gain concepts on testing procedure of materials
- To obtain information on special fibres

Pre-requisites

• Fibre Science & Structure and Properties of Fibres

Course Outcomes On the successful completion of the course, students will be able to CO1 Compare the conventional and advanced spinning process. Understand CO2 Demonstrate the manufacturing process of high performance fibres. Understand Analyze the properties of fabrics produced using chemical and thermal Understand CO3 resistant fibres Explain the application of high performance fibres in Medical field Understand CO4 Evaluate the performance of specialty fibres Understand CO₅

60 TT E 12	Man Made Fibre Technology	PE	3	0	0	3

- To enable the students to learn about the polymer rheology and the laws
- To acquire knowledge on melt spinning
- To gain knowledge on solution spinning
- To comprehend the post spinning operations
- To obtain ideas on new developments in fibre spinning

Pre-requisites

Structure and Properties of Fibres

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Discuss polymer rheology and the laws	Understand						
CO2	List various spinning techniques of polymers and parameter involved	Lindoretond						
	in spinning syntheticyarn	Understand						
CO3	Explain Properties and application of synthetic yarns	Understand						
CO4	Outline the need of various post spinning operations	Understand						
CO5	Categorize the advances in the spinning process	Analyse

	Tayturad Varn Tachnology	Category	L	T	Р	Credit
60 TT E 13	Textured Yarn Technology	PE	3	0	0	3

- To impart knowledge on heat setting and mechanism of texturing.
- To understand the different methods of texturing
- To impart the knowledge on characteristics and various end uses of texturing
- To explain the concepts of different textured yarns

Pre-requisites

Yarn Manufacturing Technology

Course Outcomes

On the edecederal completion of the educe, etadente will be able to									
CO1	Explain the raw materials required for texturing and explain basic principles and methods of texturing.	Understand							
CO2	Infer the factors involved and mechanism of heat setting, discuss the fiber morphology and yarn properties during heat setting.	Understand							
CO3	Interpret about the twisting device ,heating ,cooling and take-up systems of false twist texturing and discuss about characteristics of feed yarns and process parameter like time and temperature	Understand							
CO4	Relate the air jet texturing yarn production, express airflow pattern in different types of nozzles, loop formation mechanism and analyze the evaluation of air-jet textured yarn.	Understand							
CO5	Examine the working procedure of stuffer box, edge crimping, and knit- de- knit, gear crimping, bicomponent filament texturing and differential shrinkage texturing.	Analyse

Course Contents and Lecture Schedule								
S. No.	Topics	No. of hours						
1.0	Introduction							
1.1	Introduction of Texturising	1						
1.2	Texturability of fibres	1						
1.3	State and quality of raw material required							
1.4	Classification of Texturising	1						
1.5	Basic Principles of Texturising	1						
1.6	Need for bulking of synthetic yarns							
1.7	Methods of Texturising	1						
1.8	Properties of fibres required for Texturising	1						
2.0	Heat Setting							
2.1	Definitions- Heat Setting and its need	1						
2.2	Types of Heat setting	1						
2.3	Mechanism of heat setting	1						
2.4	Factors Involved in heat setting	1						
2.5	Effect of fibre morphology	1						
2.6	Yarn properties	1						
2.7	Evaluation of heat setting processes	1						
2.8	Fundamentals of thermo-mechanical texturing	1						
2.9	Helanca Process	1						
3.0	False Twist Texturing							
3.1	Draw texturing – Definition	1						
3.2	Draw texturing - simultaneous draw texturing	1						
3.3	Draw texturing – Sequentional draw texturing	1						
3.4	Twisting devices; heating and cooling systems	1						
3.5	Take systems	1						
3.4	Characteristics of feed yarns; process parameters-time, temperature, twist, tension; evaluation of false twist. Textured yarns; end-uses.	2						
3.5	Process parameters-time, temperature	1						
3.6	Twist, tension.	2						
3.7	Evaluation of false twist	1						
3.8	Textured yarns ,End Uses	1						
4.0	Air Jet Yarn Texturising							
4.1	Types of yarns produced	1						
4.2	Airflow pattern in different types of nozzles	2						
4.3	Loop Formation Mechanism	1						
4.4	Factors involved in loop formation	1						
4.5	Evaluation of air jet textured yarn	1						
4.6	Comparison of air jet textured yarn with spun yarn	2						
4.7	False twist textured yarn and its end uses.	2						
5.0	Other Methods of Yarn Texturing							
5.1	Stuffer box texturising	1						
5.2	Edge crimping							
5.3	Bear crimping methods	1						
5.4	Bi-component filament texturing	1						
5.5	Differential shrinkage texturing	1						
5.6	Chemo - mechanical texturing	2						
5.7	Limitations and applications	1

60 TT E 44	Process Control in Spinning	Category	L	Т	Р	Credit
60 TT E 14	Frocess Control in Spinning	PE	3	0	0	3

- Study process and quality control in spinning, including relevant statistical tools.
- Explore inspection techniques and contamination control in raw materials and processes.
- Control waste and enhance raw material conservation for better yarn quality and productivity.
- Choose suitable materials and machinery for desired yarn and fabric quality.
- Understand customer needs and implement quality and audit processes in spinning mills

Pre-requisites

Yarn Manufacturing Technology – I & II

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Know the process control, key variables, and statistical methods in spinning.	Understand			
CO2	Develop skills for raw material quality control and optimizing spinning performance.	Analyse			
CO3	Learn waste minimization, yarn realization optimization, and contamination control.	Analyse			
CO4	Analyze yarn quality metrics and conduct end-use performance simulations.	Analyse			
CO5	CO5 Identify the productivity optimization in ring spinning, including machinery maintenance and environmental effects.

60 TT E 15	nome rextiles	PE	3	0	0	3

- To acquire knowledge on recent developments in furnishing and other home textile products.
- To analyze textiles based products used in home textiles.
- To acquire knowledge on various flammability requirements of home textiles.
- To acquire knowledge on recent developments in floor covering home textile products.
- To know the various designs / styles of bed linen classification, types of mattresses and mattresses covers

Pre-requisites

Fabric Manufacturing Technology

Course Outcomes

on the education of the dedica, etadoric tim be able to										
CO1	Describe different types fabrics, finishes and surface ornamentation on home textiles.	Remember								
CO2	Compare different furnishings and analyzing factors influencing in the selection of home furnishings for different products	Understand								
CO3	Discuss the type sand end uses of different floor coverings and analyze the types and factors influencing of different floor coverings.	Analyse								
CO4	Describe the types of doors, windows and their choice of fabrics used in curtains and draperies	Analyse								
CO5	Evaluate the properties of home textiles and describe the home decoration articles and bed linens	Analyse

Course C	Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1.0	Introduction	
1.1	Geographical distribution	1
1.2	Cultivation & grading of silk fibre	1
1.3	Introduction to sericulture and silk industry	2
1.4	Classification & varieties of mulberry & non mulberry silk	2
1.5	Species – multivoltine, bivoltine and univoltine species	2
1.6	Scope for non-mulberry silk in India	1
2.0	Silk Rearing	
2.1	General principles of silk worms rearing	1
2.2	Environmental conditions for silk worm rearing	1
2.3	Various methods of silk worm rearing	2
2.4	Precautions during rearing	1
2.5	Rearing equipment and their maintenance	2
2.6	Silk worm seed production and activities in a grainage house	2
3.0	Cocoon	
3.1	Cocoon quality	1
3.2	Stifling and conditioning of cocoons	1
3.3	Boiling and brushing of cocoons	1
3.4	Different types of cocoons	1
3.5	Importance of cocoon quality & Pretreatment of cocoons	2
3.6	Factors influencing quality of cocoon	1
3.7	Cocoon characteristics	1
3.8	Storage of cocoons; Cocoon sorting	1
3.9	Silk Reeling and Throwing	
4.0	Cocoon cooking – objectives, various methods cooking	1
4.1	Silk reeling - systems of silk reeling, factors influencing silk reeling	1
4.2	Silk reeling machinery	2
4.3	Re-reeling, skein finishing & packing	1
4.4	Recent developments in reeling of silk; Wild silk reeling	1
4.5	Throwing – objectives, winding, doubling, re-winding and twisting	1
4.6	Manufacture of yarns for use in ordinary, chiffon, crepe, georgette fabrics	1
4.7	Recent developments in silk throwing machinery	1
4.8	Quality Control and Testing of Silk	
5.0	Quality Control in Reeling: Characteristics of water	1
5.1	Raw silk testing- National & International methods of testing of raw silk	2
5.2	Raw silk grading	2
5.3	Application and end uses of silk	1
5.4	Different types blended fabric, modal, union fabric and spun silk	1
5.5	Market potential and demand of silk fibre, furnishing cloth	1
5.6	Branded product in silk, varities of Banaras silk	1

60 TT E 17	Silhouettes	PE	3	0	0	3

- To enable Students understand and comprehend the fundamentals of visual art.
- To impart the knowledge of properties of lines, shapes, colors and compositions made
- To enable the students develop characteristic shapes, forms and textures

Pre-requisites

• Garment Manufacturing Technology

Course Outcomes

CO1	To master the techniques of sketching and drawing	Apply
CO2	Analyze and apply different types of color schemes	Apply
CO3	Critique the aesthetics of art and fashion	Analyse
CO4	Apply the principles of designing in practical projects	Apply
CO5	Design and create fashion accessories	Apply

^{*}CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

BoS Chairman
Head of the Department
Department of Textile Technology
K S Rangasamy College of Technology
TIRUCHENGODE-637 215

Passed in BoS Meeting held on 21/11/2023 Approved in Academic Council Meeting held on 23/12/2023

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination, 50 marks for theory cum practical End Semester Examination and 40 marks for practical End semester Examination.

60 TT 501	Knitting Technology	Category	L	T	Р	Credit	
		PC	2	0	2	3	

- To explain the mechanism of weft knitting of various knitted structures.
- To demonstrate the mechanism of warp knitting of various knitted structures.
- To impart knowledge on basic knitted structures of various knitted fabrics.
- To explain the modern development in the mechanism of various knitted fabric production.
- To impart knowledge on recent trends in knitted garment production.

Pre-requisites

· Fibre Science, Spinning

Course Outcomes

CO1	Explain the classification of weft knitting machines with its yarn quality and the terminology used in knitting.	Understand
CO2	Attribute the selection of weft knitting elements and weft knitting structures.	Understand
CO3	Classify warp knitting and its structures.	Understand
CO4	Categorize the elements of flat knitting machines and its types.	Understand
CO5	Analyse the developments and quality control in knitting.	Analyse

Course Contents and Lecture Schedule								
S. No.	Topics	No. of Hours						
1	Weft Knitting							
1.1	Classification of weft knitting machines.	1						
1.2	Yarn quality requirements for knitting and its impact	1						
1.3	Terminology of the basic circular knitting machine,	1						
1.4	Single jersey and Rib – construction and knitting operation	1						
1.5	Interlock and purl knitting machines – construction and knitting operation	2						
2	Weft Knitting elements and Structures	1						
2.1	Needle selection in weft knitting - multi-cam tracks	1						
2.2	Pattern wheels, pattern drums	1						
2.3	Single jersey, rib, purl and interlock structures	1						
2.4	Characteristics and their derivatives - half and full cardigan	1						
2.5	Fundamentals of formation of knit, tuck and float stitches.	2						
3	Warp Knitting							
3.1	Classification of warp knitting machines	1						
3.2	Knitting elements and working of Raschel and Tricot knitting machines,	1						
3.3	Production of elementary warp knitted structures - lapping diagrams and notations.	1						
3.4	Open lap, closed lap, overlap, underlap, swinging, and shogging.	1						
3.5	Warp knit structures. Production calculations in warp knitting	2						
4	Flat Knitting							
4.1	Basic principles and elements of flat knitting machines;	2						
4.2	Flat knitting machines- manual	2						
4.3	Flat knitting machines- mechanical	1						
4.4	Flat knitting machines- computer-controlled.	1						
5	Recent developments and Quality Control in knitting	-						
5.1	Seamless garments	2						
5.2	Mechanism of socks knitting and process flow	2						
5.3	Process control in knitting; defects in knitted fabrics- causes and remedies	2						
Practical	<u> </u>	_						
1.	Analysing the Single jersey fabric and its derivatives.	4						
2.	Analysing the Rib, interlock fabric and its derivatives.	2						
3.	Analysing the Purl structures.	2						
4.	Production calculation of Flat knitting structures.	4						
<u>4.</u> 5.	Study the Spirality of Knitted structure.	2						
5. 6.	Identifying the different weft knitted structure faults.	4						
7.	Calculation on needle requirement for various yarn count.	1						
	Material passage and production calculation for single jersey machine.	4						
8.	Material passage and production calculation for rib weft knitting machine.	4						
9.		2						
10.	Material passage and production calculation for interlock weft knitting machine	2

60 TT 502	Textile Chemical Processing II	Category	L	T	Р	Credit
00 11 302	Textile Chemical Processing in	PC	3	0	0	3

- To impart knowledge on methods and styles of printing.
- To impart knowledge on various printing process.
- To impart knowledge on various methods of finishing.
- To impart knowledge on various functional finishing process.
- To impart knowledge on effluent treatment.

Pre-requisites

• Textile Chemical Processing I

Course Outcomes

	·	
CO1	State the ingredients, methods of printing and styles of printing. Printing defects and limitations	Remember
CO2	Describe the printing procedure of cotton, polyester, silk, wool and garment. Discuss its faults- cause&remedies	Understand
CO3	Explain the procedure involved in finishing of cotton materials using various machines and procedure involved in finishing of denims.	Understand
CO4	Describe the procedure involved in crease resistance, water proof, water repellent, flame proof and value added finishing.	Understand
CO5	Analyse the various treatments of textile effluents, waste disposal & solid waste reduction techniquesand concepts of ISO14000.	Analyse

60 TT 503	Wayan Fabria Structura	Category	L	ı	Р	Credit
60 11 303	Woven Fabric Structure	PC	3	0	0	3

- Teaching the foundational principles of woven fabric design and how they influence fabric characteristics
- Instructing on various weaves and production techniques
- Providing insight into color theory and its application in woven fabrics
- Exploring concepts related to pile and multi-layer fabrics
- Disseminating knowledge on advanced fabric structures

Pre-requisites

Nil

Course Outcomes

	The state of the s	
CO1	Elaborate on the components of fabric structure and basic weaving patterns.	Understand
CO2	Provide insights into the loom specifications for special weaves and color theory, while examining the interplay of color and weave effects.	Remember
CO3	Discuss the loom prerequisites and applications of additional thread figuring, while scrutinizing backed fabrics and the concept of Bedford cords.	Understand
CO4	Evaluate the design principles behind pile fabrics, multilayer fabrics, and double cloths.	Remember
CO5	Examine advanced weave structures and their corresponding loom requirements.	Understand

Elements of Simple Structure * Elements of fabric structure and the devices used for analyzing the fabrics; elementary weaves — plain weave and its derivatives, twill weave and its derivatives, twill and twist interaction, twill angle; satin, sateen weaves and their derivatives; methods of representation on point paper; different types of drafts; loom requirements for producing primary weaves.										
Design, cl comb, bri weaves;	Special Weaves and Colour Theory ** Design, characteristics, loom requirements and uses of special weaves – ordinary honey comb, brighton honey comb, huck –a – back and its modifications, mock leno, crepe weaves; colour theory – light and pigment theory, modification of colours, application of colours, colour and weave effects. [9]									
Design, cl backed fa fabrics, be and wadd	Compound Structure * Design, characteristics, loom requirements and uses of extra warp, extra weft figuring and backed fabrics; extra warp and extra weft figuring with single and two colours; backed fabrics, bed ford cords, plain faced, twill faced and wadded bed ford cords; welts, piques and wadded piques. [9]									
Pile Fabrics and Multi-Layer Fabrics *** Design, characteristics, loom requirements and uses of pile fabrics and multilayer fabrics -Warp pile: wire pile, fastwire pile. Weft Pile: plain back, twill back velveteen; Double cloths-classification, types of stitches, wadded double cloth, warp and weft wadded double cloth, centre stitched warp and weft way double cloth; multi-layer fabrics. 60 TT 504	Tochnical Toxtiles I	Category	L	Т	Р	Credit
60 11 504	Technical Textiles I	PC	3	0	0	3

- To share information about different fibers utilized in industrial textiles.
- To provide insights into the realm of medical textiles.
- To gain a foundational understanding of geotextiles.
- To convey knowledge about protective textiles.
- To explore the diverse applications of textiles in the field of transportation.

Pre-requisites

• Nil

Course Outcomes

CO1	Summarize the categorization of technical textiles with the fibers, yarns, and fabric varieties employed in technical textiles	Understand
CO2	Understand the role of textile materials in the medical textiles product development.	Understand
CO3	Categorize the essential properties for fabric components utilized and applications of Geo textiles.	Analyse
CO4	State the functions and diverse criteria for protective textiles.	Analyse
CO5	Outline the functions and various requirements of transportation textiles.	Apply

60MY003	Startups and	Category	L	T	Р	Credit
00W1003	Entrepreneurship	MY	2	0	0	2*

- To Learn basic concepts in entrepreneurship, develop mind-set and skills necessary to explore entrepreneurship
- To provide practical proven tools for transforming an idea into a product or service that creates
 value for others.
- To Comprehend the process of opportunity identification through design thinking, identify market potential and customers while developing a compelling value proposition solution and prototypes
- To create business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture ideas & solutions built with domain expertise
- To Prepare and present an investible pitch deck of their practice venture to attract stakeholders

Pre-requisites

· Basic knowledge of reading and writing in English

Course Outcomes

CO1	Develop an entrepreneurial mindset and appreciate the concepts of design thinking, entrepreneurship and innovation	Understand
CO2	Apply process of problem -opportunity identification and validation through human centred approach to design thinking in building solutions	Apply
CO3	Understand market types, conduct market estimation, identify customers, create customer persona, develop the skills to create a compelling value proposition and build a Minimum Viable Product	Apply
CO4	Create business plan, conduct financial analysis and feasibility analysis to assess the financial viability of a venture	Apply
CO5	Prepare and deliver an investible pitch deck of their practice venture to attract stakeholders	Apply

30 11 371	Laboratory	PC	0	0	3	1.5

- To acquire practical knowledge on Direct style of printing.
- To acquire practical knowledge on discharge and resist style of printing.
- To acquire practical knowledge on finishing.
- To acquire practical knowledge on special finishing.
- To acquire practical knowledge on testing.

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Practice the direct style of printing using pigments and dyes.	Understand
CO2	Perform the discharge and resist style of printing process.	Understand
CO3	Apply Tie & Dye style of printing and cationicSofteners finishing	Apply
CO4	Practice the fragrance, water repellent finish and shrinkage test.	Apply
CO5	Determine the various colour fastnesses rubbing Washing and Perspiration	Analyse

List of Experiments:

- 1. Direct style of printing on cotton fabric using pigment printing.
- 2. Direct style of printing on cotton fabric using Vinyl sulphone Reactive Dyes.
- 3. Discharge style of printing on cotton fabric white & colour base
- 4. Resist style of printing on cotton fabric white & colour base
- 5. Tie & Dye style of printing on cotton fabric.
- 6. Finishing of cotton fabric using cationicSofteners.
- 7. Finishing of cotton fabric using fragrance/aroma finish.
- 8. Determination of water repellent finish and shrinkage test.
- 9. Determination of colour fastness to rubbing and Washing.
- 10. Determination of colour fastness to Perspiration.

Design Experiments:

- 1. Design a flower shape in direct style of Printing by using reactive dyes.
- 2. Design a national flag in the tie and dye style method.

Total Hours: 45

60 TT 5P2	Fabric Structure Laboratory	Category	L	Т	Р	Credit
00 11 3F2	Fabric Structure Laboratory	PC	0	0	3	1.5

- Educate on the intricacies of various weave structures.
- Convey knowledge on utilizing different fabric parameters for designing based on specific applications.
- Offer foundational understanding of color theory for its practical application in fabric design and construction
- Provide exposure to the analysis of diverse fabric structures, emphasizing construction details.
- Impart knowledge on color theory applicable to fabric production, encompassing various color combinations and designs.

Pre-requisites

Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Acquire understanding of fabric structure elements and basic weaving patterns.	Analyse
CO2	Elaborate on the loom specifications needed for unique weaves and explore the principles of color theory.	Analyse
CO3	Delve into the loom prerequisites and applications of additional thread figuring.	Analyse
CO4	Evaluate backed fabrics and grasp the concepts of mock leno and bedford cords.	Analyse
CO5	Elaborate on the loom specifications and applications of sophisticated weave structures.	Analyse

60 TT 5P3	Design Thinking and	Category	L	Т	Р	Credit
	Innovation Laboratory	PC	0	0	2	1

- Understand the principles of design thinking and their application in engineering innovation
- Identify real-world engineering problems through brainstorming and mind mapping
- Explore problem space using secondary research methods, including the 5Ws and 1H Matrix, and user participant mapping
- Conduct primary research from multiple perspectives to ensure a user-centered approach
- Define and analyze problem areas to develop clear and well-structured problem statements

Pre-requisites

-Nil-

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Apply design thinking principles to promote innovation.	Apply
CO2	Identify and articulate real-world engineering problems through brainstorming and mind map techniques.	Apply
CO3	Perform secondary research using tools 5Ws and 1H Matrix and user participant mapping to explore problem spaces.	Apply
CO4	Conduct primary research to gather insights from diverse perspectives, ensuring a user- centered approach in problem-solving.	Apply
CO5	Define and analyze problem areas to create precise and actionable problem statements.	Analyse

60 CG 0P4	CAREER SKILL DEVELOPMENT	Category	L	T	Р	Credit	
	IV	CG	0	0	2	1*	

- To help learners improve their vocabulary and enable them to use words appropriately in different academic and professional contexts.
- To help learners develop strategies that could be adopted while reading texts.
- To help learners acquire the ability to speak and write effectively in English in real life and career related situations.
- Improve listening, observational skills, and problem-solving capabilities
- Develop message generating and delivery skills

Pre-requisites

• Basic knowledge of Arithmetic and Logical Reasoning

Course Outcomes

CO1	Compare and contrast products and ideas in technical texts.	Analyse
CO2	Identify cause and effects in events, industrial processes through technical texts	Analyse
CO3	Analyse problems in order to arrive at feasible solutions and communicate them orally and in the written format.	Analyse
CO4	Report events and the processes of technical and industrial nature.	Apply
CO5	Articulate their opinions in a planned and logical manner, and draft effective résumés in context of job search.	Apply

60 TT E 21	Fibres for Smart Textiles	Category	L	ı	Р	Credit
	Fibres for Smart Textiles	PE	3	0	0	3

- Overview smart textiles' history, trends, and future.
- Detail properties and uses of diverse fibres.
- Explore conductive and responsive fibre fabrication.
- Introduce coatings and composite fibres.
- Promote hands-on application in real-world scenarios

Pre-requisites

Fibre Science

Course Outcomes

CO1	Describe smart textiles and their applications.	Remember
CO2	Evaluate fibres for specific textile uses.	Understand
CO3	Apply fabrication methods for advanced fibres.	Understand
CO4	Develop textiles with functional coatings and composites.	Understand
CO5	Communicate textile concepts effectively through presentations and reports.	Understand

5.7	Combining Materials for Desired Functionalities: Strength, Conductivity	1								
5.8	Examples of Smart Textile Products Incorporating Functional Coatings and Composite Fibres	2								

1. Dr. Bharani Murugsan - bharanim@ksrct.ac.in

60 TT E 22	Functional Finishes	Category	L	Т	Ρ	Credit
		PE	3	0	0	3

- To impart knowledge on chemical finishing.
- To impart knowledge on Hand Building Finishes and effects.
- To impart knowledge on Ultraviolet Protection and Elastomeric Finishes.
- To impart knowledge on Antimicrobial and Blood Repellent Finishes.
- To impart knowledge on Novel Finishes on textile fabrics.

Pre-requisites

• Textile Chemical Processing I

Course Outcomes

CO1	Explain the Importance, methods of chemical finishing. Softening finishes: Mechanisms of the softening effect.	Remember
CO2	Describe the hand building effect and valuation methods. Non-Slip Finishes.	Understand
CO3	Explain the mechanism of UV protection, EMI Shielding, elastomeric effect and evaluation.	Understand
CO4	Discuss the procedure involved in antimicrobial and blood repellent finish. Chemicals/agents used and their interaction.	Understand
CO5	Analyse the various novel finishes and Smart textiles by chemical finishing.	Analyse

60 TT E 24	Export Policies and Documentation	Category	L	Т	Р	Credit
	Export Policies and Documentation	PE	3	0	0	3

- Conveying insights into diverse facets of export trade, export finance, and the foreign exchange market.
- Providing understanding of product planning, development, product cycle, and market dynamics.
- Offering knowledge on EXIM policies, export documents, and export procedures.
- Evaluating government-led export promotion initiatives.
- Analysing pricing policies and terms prevalent in export trade.

Pre-requisites

• Total Quality Management

Course Outcomes

CO1	Differentiate domestic and international trade, merits and demerits & functions of Regional Trade Blocksand summarize the international business environment, regulatory framework and export barriers.	Remember
CO2	Analyse the different types of export credit facilities available for exporters and describe the export riskcoverage facilities	Understand
CO3	Summarize the concept of balance of payment and its functions and factors affecting counter trade andforeign exchange functions	Apply
CO4	Outline the export promotion activities undertaken by the government, summaries the foreign traderegulation act for regulating export trade	Analyse
CO5	Discuss the steps involved in export activity from raw material to shipping and the documents to be produced in bank for payment clearance and documents to be produced in central excise department claiming incentives.	Analyse

60 11 E 25	Protective Textiles	PE	3	0	0	3

- To provide an overview about the material selection, design and standard for protective textiles.
- To taught the various hazards and treatment methods to vanquish the hazards
- To educate the scope and functions of intelligent textiles in protective applications.
- To inculcated the construction of various protective garments.
- To enlighten the requirement for defense application and to evaluate the protective garment

Pre-requisites

Fabric Manufacturing Technology

Course Outcomes

CO1	Exceeded safety standards, establishing new industry benchmarks through critical analysis.	Understand
CO2	Pioneered user-centric protective textiles using innovative, problem- solving approaches.	Understand
CO3	Engineered hazard-specific textiles through comprehensive threat analysis.	Analyse
CO4	Customized textiles for diverse sectors, demonstrating adaptive, needs-focused thinking.	Apply
CO5	Enhanced textile performance continuously, utilizing reflective assessment strategies	Analyse

Materials, Standards and Design for Protective Textiles* Introduction, Definition, Classification, Materials and technologies, Fibres and Fabrics for protective textiles. Steps in the selection of protective clothing materials. Requirements, International standards, Certification. Design - Factors influencing the design development process, Clothing systems and functionality, Harmonize fashion and function.								
Hazards &Surface treatments for protective textiles* Introduction, Types of hazards, Mechanical hazards - Ballistic and knife protection, Blunt impact protection. Chemical and biological hazards. Electrical and radiation hazards Environmental and fire hazards, Surface treatment – Types, pre treatments for protective textiles, Different finishes for protective textiles, Fundamental & Modern treatment process.								
Intelligent textiles and Protection against UV, Thermal, Ballistic & other hazards** Smart textiles, Application of smart textiles for protective purposes, Sensor function, Data processing, Actuators, Energy, Communication, Electric actuation. Textiles for UV protection, Textiles for protection against cold, Thermal (heat and fire) protection, Ballistic protection, Microorganism protection, Textiles for respiratory protection, Electrostatic protection.								[9]
Protection against Civilian, Chemical and biological protection & defense*** Classification of chemical protective clothing, Garment types, materials, design features and sizing, Garment material chemical resistance testing, Chemical protective clothing integrity performance & properties. Protective clothing for Firefighters and Protection for workers in the oil and gas industries Introduction, General requirements for military protective textiles,								[9]
Camouflage, concealment and deception, NBC protection. Evaluation of Protective Textiles**** Standards and test method for protective fabric performance – flame retardant finishes, liquid repellent finishes, antistatic, liquid repellent, antibacterial, UV protection, mite protection; manikins-thermal manikins, segmented thermal manikins; evaporative resistance measurement-moisture permeability index, skin model; concept of dynamic manikins; permeation resistance test-index of penetration and index of repellency; liquid tight integrity and gas tight integrity. 60 TT E 26	Apparel Production Machinery	Category	Ш	Т	Р	Credit
	and Equipment	PE	2	0	2	3

- To impart the various aspects of spreading and cutting machines and functions of the sewing
- To Select work aid attachments and expertise in computer controlled sewing machine.
- To acquire knowledge on the design and operational features of garment production machinery and equipment.
- To understand the various garment folding, computer controlled sewing machines.
- · To know the details of garment machinery and equipment with focus on the means of exploiting the features built in the garment machinery and equipment.

Pre-requisites

· Garment Manufacturing Technology

Course Outcomes

On the successful completion of the course, students will be able to

CO1	State the types and functions of spreading and cutting machine.	Remember
CO2	Explain the various parts and functions of sewing machine.	Understand
CO3	Describe the classification of sewing machine according to bed types, belt drives and the functions of over lock and flat lock.	Understand
CO4	Explain the various work aids and attachments of sewing machines and safety care.	Understand
CO5	Demonstrate the various special purpose machines and its care and maintenance.	Remember

^{*}CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination, 50 marks for theory cum practical End Semester Examination and 40 marks for practical End semester Examination.

60 HS 003	Total Quality		Credit			
60 H3 003	Management	HS	3	0	0	3

- To facilitate the understanding of total quality management principles, tools and techniques
- To equip the students to apply the TQM principles, tools and techniques in manufacturing sectors
- To equip the students to apply the TQM principles, tools and techniques in service sectors
- To impart knowledge on quality management principles, tools, techniques and quality standards for real life applications
- To make the students understand the importance of standards in the quality assurance process and their impact on the final product

Pre-requisites

NIL

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Recognize the need for quality concepts and its application in organizations.	Remember
CO2	Apply the TQM principles for survival and growth in world class competition.	Understand
CO3	Apply the traditional tools and new tools for quality improvement.	Understand
CO4	Apply the tools and techniques like quality circle, QFD, TPM and FMEA for qualityimprovement.	Apply
CO5	Apply QMS and EMS in organizations.	Apply

60 TT 601	Textile and Apparel Quality	Category	L	Т	Р	Credit
	Evaluation	PC	3	0	0	3

- To study the importance of quality evaluation.
- To know in detail the various aspects of testing fibre properties.
- To know in detail the various aspects of testing yarn properties.
- To know in detail the various aspects of testing fabric properties.
- To know in detail the various aspects of assessing garment properties.

Pre-requisites

Nil

Course Outcomes

CO1	Analyse and differentiate between various textile quality types and their influencing factors.	Analyse
CO2	Assess fiber and yarn properties using specialized instruments, understanding their roles in quality control.	Analyse
CO3	Design protocols for comprehensive fabric and apparel quality assessments.	Apply
CO4	Conduct quality evaluations for specialty fabrics, using industry- specific standards.	Apply
CO5	Interpret textile test results, relating them to performance standards and end-use implications.	Analyse

- To impart knowledge on fabric spreading and cutting
- To impart knowledge on stitches, seams and sewing machine
- To impart knowledge on human anatomy and body measurements
- To impart knowledge on basic pattern making
- To impart knowledge on pattern grading and marker planning

Pre-requisites

Basic knowledge about woven and knitted fabrics

Course Outcomes

CO1	Understand the fabric spreading process and various types of cutting machines	Understand
CO2	Sketch various head theories and difference between normal figure and fashion figure	Apply
CO3	Classify the different stitches, seams, sewing threads and Basics of SNLS	Remember
CO4	Demonstrate the skills acquired on basic patterns for mens, womens and childrens	Apply
CO5	Demonstrate the skills acquired on grading patterns for different garments and marker planning and marker making	Apply

	Design Thinking and	Category	L	T	Р	Credit
60 TT 6P3	Product Development Laboratory	PC	0	0	2	1

- Ideate and develop innovative solutions for the given problem statement
- Develop soft prototype and visualize user scenarios for early-stage product validation
- Develop medium and hard prototype, integrating technical, ergonomic, and aesthetic considerations
- Conduct testing, gather user feedback, and apply iterative design processes
- Document, publish and present their solution

Pre-requisites

Design Thinking and Innovation Laboratory

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Generate innovative solutions to address specific problem statements.	Apply				
CO2	Create and evaluate soft prototype, including paper prototypes and storyboards, to test initial design concepts.	Create				
CO3	CO3 Create medium and hard prototype using 3D modelling and printing, incorporating human factors and system design.					
CO4	Perform usability studies, analyze user feedback, and iterate their designs to finalize user-centered solutions.	Analyse				
CO5	Prepare professional documentation, and deliver a comprehensive project report and presentation.	Apply

60 TT E 31	Fibre Materials for Advanced Technical	Category	L	Т	Р	Credit
00 11 E 31	Textiles	PE	3	0	0	3

- Understand the history, definitions, and scope of technical textiles.
- Study the properties, production, and environmental impact of natural, regenerated, and synthetic fibers.
- Learn about the industrial applications of fibers and related technologies.
- Analyse the environmental sustainability of fiber production processes.
- Encourage the use of emerging materials and assess their impact on the industry.

Pre-requisites

Fibre Science

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Classify and understand the historical and market contexts of technical textiles.	Understand
CO2	Gain detailed knowledge of various fiber types and their environmental considerations.	Remember
CO3	Apply knowledge of fiber technologies across multiple industries.	Apply
CO4	Evaluate and propose sustainable practices in fiber production.	Analyse
CO5	Explore and critique future materials and technological innovations in textiles.	Analyse

^{*}SDG 9 – Industry Innovation and Infrastructure

Course Contents and Lecture Schedule No. of S. No. **Topics** Hours **Concepts of Industrial Engineering and Productivity** 1 Industrial Engineering - definition and scope. 1.1 1 Role of industrial engineers, Tools, techniques and benefits of industrial 1.2 2 engineering Productivity – definition, different Productivity indices. 1.3 1 1.4 Factors influencing productivity 1 Reasons and suggestions for improving productivity 1.5 1 Work Study and Method Study 2 Work study – definition and purpose 2.1 1 Method study – definition and purpose 2.2 1 Method analysis charts, symbols and diagrams 2.3 Charts indicating process sequence – outline process chart, Flow process chart 2.4 1 (man, material and equipment type) Charts using time scale - multiple activity charts 2.5 1 Diagrams indicating movement – flow diagram, string diagram and travel chart. 2.6 1 **Motion Study and Work Measurement** 3 Motion study - Principles of Motion economy, classification of movements 3.1 1 Two handed process chart, Micro motion study -chart, SIMO chart 3.2 1 Work measurement- definition and purpose 3.3 1 Techniques of time study – stop watch method 3.4 1 Rating factor – Definition and types; 3.5 1 Allowances - definition and types 3.6 1 **Product Lavout** 4 4.1 Lay out - definition and types of garments lay out with examples 1 Steps for developing a new layout 4.2 1 Application of IE techniques 4.3 1 capacity study calculation, measurement of operator performance 4.4 1 WIP (Work in Progress) 4.5 1 Operation Bulletin - objectives and examples. 4.6 1 Work Environment and Material Handling 5 Work environment – factors influencing working environment 5.1 1 Lighting, ventilation, temperature control, humidity control and noise control 5.2 2 Ergonomics: Classification of material handling equipment's 5.3 1 5.4 Material handling equipment's used in textile and apparel industry 2 Practical: Study of existing method involved in garment manufacturing. 11. 12. Suggestions for improvement in new method. 2 Time study for construction of T-Shirt 13. 2 14. Time study for construction of Trouser 2 Time study for construction of Skirt. 15. 2 Economical lay out for garment production. 2 16. Standard time - method for calculating SAM. 17. 2 TAKT time calculation. 2 18. Calculate cutting, sewing, and finishing capacities for a new factory setup. 19. 2 Mini-Project 20. 12

Course Designer(s)

1. Dr.K. Saravanan – saravanan.k@ksrct.ac.in

60 TT E 24	Textile Industry and Mill Management	Category	٦	Т	Р	Credit
00 11 E 34	rextile industry and will management	PE	3	0	0	3

- To acquire knowledge on the scenario of the present textile industry
- To encompass the production management techniques To understand the functions of personnel management
- To learn the concepts of financial management
- To know the different management tools

Pre-requisites

· Yarn Manufacturing and Fabric Manufacturing

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain the procedure for establishing a new textile unit	Understand
CO2	Discuss the application of ERP in textile industry	Remember
CO3	Describe regarding the human resource planning and grading	Understand
CO4	Analyse the profit and loss account and balance sheet	Remember
CO5	Appraise on the various management tools	Apply

Course	Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1.0	Textile Industry	
1.1	Indian Textile and clothing industry scenario	1
1.2	Procedure to set up a new textile/apparel unit	1
1.3	SWOT analysis of the Indian Textile Industry	1
1.4	National Textile Policy	1
1.5	TN New Integrated Textile Policy	1
1.6	Promotional schemes for textile announced by the government	1
1.7	TMTT, TUFS, TWRFS Service organizations	2
1.8	Role of EPC, TRA, CITI, ITTA	2
1.9	Ministry of Textiles – Functions	1
2.0	Production Management	
2.1	Spin plan, Weave plan	1
2.2	modification of plan on need basis	1
2.3	Productivity analysis and its control in spinning and weaving	1
2.4	Production Possibility Curve	1
2.5	Operational chart, PERT	1
2.6	CPM, Inventory control	1
2.7	ERP: Application of ERP in Textile Industry	2
2.8	SAP Analysis	1
3.0	Personnel Management	I.
3.1	Functions of Personnel Management & time office	1
3.2	Human Resource Planning	1
3.3	performance appraisal	1
3.4	production performance based incentive schemes	1
3.5	Training and Development	1
3.6	Job description, Job classification and Job evaluation	1
3.7	Grading the employee: Rating system	1
3.8	Psychological test, Predictive Index	1
3.9	Myer Bridge Type Indicator	1
3.10	Basics of Labour Legislation	1
3.11	Wage structure and its components	1
4.0	Financial Management	l
4.1	Financial Management-concept, scope, functions	1
4.2	financial management cycle	1
4.3	sources of finance	1
4.4	Accounting-branches, functions	1
4.5	rules of accounting, accounting proces	1
4.6	book keeping, journal posting, ledger, trial balance	1
4.7	trading account, profit and loss account and balance sheet	1

60 TT E 35	Medical Textiles	Category	L	Т	Р	Credit
60 11 E 35	Wedical Textiles	PE	3	0	0	3

- To explain key concepts associated with healthcare textiles.
- To explore manufacturing techniques employed in the production of diverse implantable medical textile products.
- To impart knowledge on the characteristics and varied applications of non-implantable and extracorporeal medical textile products.
- To develop an understanding of the materials utilized in wound dressing and their respective applications.
- To impart knowledge on smart medical textiles and legal issues in medical textiles.

Pre-requisites

Technical Textile I & II

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Explain the concepts related to healthcare textiles.	Understand
CO2	Interpret techniques involved in the production of various implantable medical textile products.	Understand
CO3	Develop knowledge on the characteristics and uses of non- implantable and extracorporeal medical textile products.	Apply
CO4	Define the materials used in wound dressing	Remember
CO5	Explain the concepts related to smart medical textiles.	Understand

Course (Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1.0	Introduction to Production and Operation Management	
1.1	Functions of production management, Relationship between production and other functions	1
1.2	Production management and operation management	2
1.3	Characteristics of modern production and operation management	1
1.4	Organization of production function	1
1.5	Recent trends in operation and production management,	2
1.6	Production as an organizational function	1
1.7	Decision making in production operation research.	1
1.8	Functions of production management, Relationship between production and other functions	1
2.0	Production and Operation Systems	
2.1	Production systems - principles and models	1
2.2	CAD and CAM	1
2.3	Automation in production, functions and significance,	2
2.4	Capacity and facility planning, Importance of capacity planning	2
2.5	Capacity measurement	1
2.6	Capacity Requirement Planning (CRP) process for manufacturing and service industry.	2
3.0	Production and Operation Planning	
3.1	Facility planning, Location of facilities, location flexibility	1
3.2	Facility design process and techniques,	1
3.3	Location break even analysis	1
3.4	Production process planning, steps for production process	2
3.5	Characteristics of production process systems,	1
3.6	Production planning control – functions	1
3.7	Planning phases, Action phase and Control phase	1
3.8	Aggregate production planning.	1 1
4.0	Production and Operation Management Process	
4.1	Process selection with PLC phases, process simulation tools	1
4.2	Work study – significance, methods, evolution of normal/standard time,	2
4.3	Job design and rating, Value analysis	1
4.4	Plant layout – meaning, characters, plant location techniques, types	1
4.5	MRP and layout design	1
4.6	Optimization and Theory of Constraints (TOC), Critical Chain Project Management (CCPM), Relationship (REL) chart,	2
4.7	Assembly line balancing, Plant design optimization, Forecasting methods.	1
4.8	Process selection with PLC phases, process simulation tools	1
4.9	Work study – significance, methods, evolution of normal/standard time,	2
5.0	Controlling Production and Operation Management	
5.1	Material Requirement Planning (MRP), concept, process and control,	1
5.2	Inventory control systems and techniques, JIT and Lean manufacturing,	2
5.3	Quality management – Preventive Vs Breakdown maintenance for quality	1
5.4	Techniques for measuring quality - Control chart (X, R, p, np and C charts)	2
5.5	Continuous improvement (Kaizen), Quality awards, supply chain management, total quality management	2
5.6	Six sigma approach and Zero Defective Manufacturing.	1

^{*}CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 60 marks for theory End Semester Examination, 50 marks for theory cum practical End Semester Examination and 40 marks for practical End semester Examination.

60 TT 701	Garment Manufacturing Technology II	Category	L	T	Р	Credit
00 11 701	Garment Manufacturing Technology II	PC	3	0	0	3

- Understand the dynamics of the apparel industry including product life cycles, quality, and pricing strategies
- Gain knowledge of apparel production systems and plant layout designs for efficiency
- Master the use of advanced sewing tools and techniques for garment construction
- Learn the application and function of garment accessories and modern pressing techniques
- Develop strategic planning and machinery selection skills tailored for garment manufacturing

Pre-requisites

• Garment Manufacturing Technology I

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Analyse and interpret the structure and operations of the apparel industry.	Analyse
CO2	Design and implement efficient apparel production systems.	Apply
CO3	Demonstrate proficiency in using sewing tools and addressing garment construction challenges.	Apply
CO4	Apply finishing techniques and accessories to enhance garment quality.	Apply
CO5	Make informed decisions on machinery selection for optimized garment production.	Apply

L	Semes	ster H	lours/Wee		-1					
Objectives and functions of financial management. Capital budgeting – Nature & Principles – Evaluation of capital expenditure decisions – DCF and Non-DCF Techniques; Depreciation – method of computing depreciation – DCF and Non-DCF Techniques; Depreciation – method of computing depreciation — Morking Capital and Inventory Management* Capital structure - Capital structure theories and cost of capital - Computing specific costs of capital – Cost of debt, Preference shares, Equity and Retained earnings; Working capital; Definition, Principles and Types of working capital – Gross and Net working capital. Sources of Finance. Inventory- Inventory control techniques - Economic order quantity, ABC analysis. Cost Accounting* Cost accounting purpose – utility of costing – Methods and Techniques of Costing - Job, Batch and contract costing process costing: joint and by product costing in apparel manufacturing - Elements of cost - Material cost, labour cost and expenses Costing in Fabric Preparation* Yarn Conversion cost, Selling price of various wastes. Calculation of Yarn requirements for weaving - Conversion cost from winding to weaving, Knitting Cost - Raw material requirements for knitting, Cost of knitted fabric. Processing Cost - Estimating of cost for Bleaching, Dyeing Printing and Finishing of fabric. Garment Costing Garment Costing Total Hours: 45 + 15 (Tutorial) Pandey.I.M., "Financial Management", Vikas Publishing House Pvt. Ltd., New Delhi, 10thEdition, 2012, ISBN: 8125937145 / ISBN: 9788125937142. ^{*}SDG8 Decent Work and Economic Growth

Course C	Contents and Lecture Schedule	
S. No.	Topics	No. of hours
1.0	Introduction and Capital Budgeting	
1.1	Objectives and functions of financial management	1
1.2	Capital budgeting – Nature & Principles	1
1.3	Evaluation of capital expenditure decisions	1
1.4	Evaluation of capital expenditure - DCF Techniques	2
1.5	Evaluation of capital expenditure - Non-DCF Techniques	2
1.6	Depreciation – method of computing depreciation	2
1.7	Tutorial	3
2.0	Working Capital and Inventory Management	
2.1	Capital structure - Capital structure theories and cost of capital	1
2.2	Computing specific costs of capital – Cost of debt, Preference shares	1
2.3	Computing specific costs of capital - Equity and Retained earnings	1
2.4	Working capital – Definition and Principles	1
2.5	Types of working capital – Gross and Net working capital	2
2.6	Sources of Finance	1
2.7	Tutorial	3
3.0	Cost Accounting	·
3.1	Cost accounting - purpose	1
3.2	Utility of costing	2
3.3	Methods and Techniques of Costing	1
3.4	Job, Batch and contract costing	2
3.5	Process costing	1
3.6	Joint and by-product costing in apparel manufacturing	2
3.7	Tutorial	3
4.0	Costing in Fabric Preparation	l .
4.1	Yarn Conversion cost, Selling price of various wastes	1
4.2	Calculation of Yarn requirements for weaving - Conversion cost from winding to weaving.	2
4.3	Knitting Cost - Raw material requirements for knitting	1
4.4	Cost of knitted fabric	1
4.5	Processing Cost - Estimating of cost for Bleaching and Dyeing,	2
4.6	Processing Cost - Estimating of cost for Printing and Finishing of fabric.	2
4.7	Tutorial	3
5.0	Garment Costing	
5.1	Costing of garments - factors that determine the price of garments	1
5.2	Calculation of cutting, making and trim costs (CMT cost)	2
5.3	Calculation of garment weight of different sizes and style	2
5.4	Accessories Costing	1
5.5	Costing calculation for various testing	1
5.6	Calculation of HOK and OHS	2
5.7	Tutorial	3

60 TT 703	Nonwoven Technology	Category	L	T	Р	Credit
	Nonwoven recimology	PC	2	0	2	3

- To Teach students the basics of nonwoven fabrics, including what they are and how they're categorized.
- To Educate students on the materials used in nonwovens and how they're processed.
- To Develop students' skills in creating nonwoven fabrics using different methods.
- To Teach students various ways to bonding of nonwoven materials.
- To Show students how to test nonwovens and explain their uses in different industries

Pre-requisites

Nil

Course Outcomes

CO1	Recognize nonwoven fabrics, their types, and features.	Understand
CO2	Skilled in making nonwoven fabrics using several techniques.	Apply
CO3	Know how to bond nonwoven materials together.	Analyse
CO4	Know how the production of nonwoven materials	Analyse
CO5	Finishing and testing of nonwoven fabrics.	Apply

60 AC 001	Research Skill Development	AC	1	0	0	0

- · To identify research problems, formulate hypotheses, collect data and test hypotheses
- To prepare and submit quality manuscripts and understand peer review process
- To utilize software tools for effective manuscript preparation and visualization of research data
- To familiarize different journal metrics and author-level quality indicators
- To protect creative works, inventions, and branding elements using IPR

Pre-requisites

Nil

Course Outcomes

CO1	Develop structured scientific approach to plan and execute research work	Apply
CO2	Comply with the journal requirements to publish research findings effectively	Understand
CO3	Apply various software tools during the manuscript preparation	Apply
CO4	Select suitable journals to publish the work using different publication metrics	Analyse
CO5	Apply the appropriate form of IP protection to a specific invention or creation	Apply

- To impart training on usage of software in Textile designing.
- To know the application of drafting procedure through computer.
- To understand the industrial pattern drafting system and application.
- To know the pattern grading application through computer.
- To acquire knowledge in measuring the important parameter of colour difference

Pre-requisites

Garment Manufacturing Technology II

Course Outcomes

On the successful completion of the course, students will be able to

on the addedding completion of the addition of the addition of the addition							
CO1	Practice to draw the design draft and peg plan for different weaves and it derivatives using win soft software and Demonstrate simulation of checked and striped fabric	Apply					
CO2	Calculate the cost of different types of fabrics, Demonstrate simulation of jacquard and dobby designs.	Understand					
CO3	Practice to draft the patterns for different garments and Demonstrate grading for different components of a garment	Understand					
CO4	Execute marker planning for the patterns and Arrange the components on the lay	Understand					
CO5	Calculate the efficiency of laying by placing the components effectively	Apply

VII	0	0	4	60	2	100	-	100					

Each student has to do a project work from any industrial related problems or innovations in technology or critical studies related to textiles (As decided during their VIth semester). The student can undertake the project work individually or in a group not exceeding three students. The works to be undertaken during this phase I is given below:

- I. Complete 20% of project work and present their findings in Review I
- II. Complete 60% of project work and present their findings in Review II
- III. Complete 70% of project work and present their findings in Review III
- IV. Complete 100% of project work before the commencement of VIIIth semester

•To give practical industrial exposure to the students on the day-to-day working of textile industries.

Pre-requisites

• Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Demonstrate the working of the factory	Apply
CO2	Categorize the machines, products and work force	Apply
CO3	Compare the performance of machines, quality and description of products and efficiency of work force.	Apply
CO4	Compile the data on machine, material men and relevant parameters	Analyse
CO5	Discuss the working of machines, product quality, general mill particulars and	Apply

Each student has to compulsorily undergo an Internship in any one of the textile industry for a minimum period of 4/8 weeks. This has to be carried out after completion of each semester examination and before commencement of the next semester classes.

Each student has to follow the below mentioned guidelines:

- 1. Drawing the layout plan of building and machineries of the selected.
- 2. Listing out the Organization chart.
- 3. Noting down the number of machineries of each type and its technical details-Motor HP, Motor rpm, Production capacity of the machine.
- 4. Making the production process flow chart.
- 5. Noting down the existing production details for all products.
- 6. Noting down the maintenance schedule.
- 7. Learning regarding inventory and despatch sections.
- 8. Noting down the allocation of man power for different processes.
- 9. After completion of training programme a report has to be prepared.
- 10. The report has to be signed by the Internship Coordinator / HoD.
- * Extra credits will be offered as additional credits depending on the duration of the internship
- *SDG 9 Industry Innovation and Infrastructure
- **SDG 3 Good Health and Well Being
- ***SDG 7 Affordable and Clean Energy

60 TT E 41	Surface Characteristics of Fibres	Category	٦	Т	Р	Credit
60 11 E 41	Surface Characteristics of Fibres	PE	3	0	0	3

- Understand the types and surface properties of various fibers.
- Master analytical techniques for fiber surface characterization, such as SEM, AFM, and XPS.
- Analyse how fiber surface properties impact functionality.
- Learn and apply methods to modify fiber surfaces for enhanced properties.
- Explore the sustainable application of surface-characterized fibers in multiple industries.

Pre-requisites

Fibre Science

Course Outcomes

CO1	Differentiate and describe fiber types based on their surface properties.	Analyse
CO2	Skillfully use analytical tools to evaluate fiber surfaces.	Analyse
CO3	Link surface properties with fiber performance in applications.	Apply
CO4	Design and implement fiber surface treatments for specific uses.	Analyse
CO5	Incorporate sustainability into fiber technology projects	Analyse

60 TT E 44	Textile and Apparel Entrepreneurship	PE	3	0	0	3

- Aware of the importance of entrepreneurship opportunities available in the society for the entrepreneur.
- Acquaint them with the challenges faced by the entrepreneur.
- Comprehend the market survey and techno economic feasibility assessment.
- Apprise them costing and break-even analysis.
- Mindful the Sickness in small industries, causes and consequences, corrective measures

Pre-requisites

• Garment Manufacturing Technology I&II

Course Outcomes

CO1	State the entrepreneurship concept, definition and characteristics and the types of entrepreneurship and entrepreneurial growth.	Understand
CO2	Categorize the types of small-scale industries and the market survey and techno-economic feasibility assessment.	Remember
CO3	Explain the sources of finance and financial assistance, costing and break-even analysis.	Understand
CO4	Describe the sickness in small industries, its causes and consequences, corrective measures, and the various government policies for small-scale enterprises and business incubators.	Remember
CO5	Comprehend the various electronic commerce, small enterprises and various leadership in the new economy and hiring the right employees	Apply

60 TT E 45	Smart Textiles	Category	L	Т	Р	Credit
60 TT E 45	Siliari Textiles	PE	3	0	0	3

- To provide an overview about the smart technology, material selection, design and manufacturing system.
- To teach the heat storage and thermo-regulating properties of textiles.
- To give an overview on of Thermal insulated textiles and educate on the various functional finishes involved in Thermal insulated textiles production.
- To inculcate the scope, construction and functions of wearable technologies.
- To enlighten the Bioprocessing and Tissue engineering applications for smart textiles and clothing.

Pre-requisites

Technical Textiles I and II

Course Outcomes

CO1	Recall and list key materials and principles underpinning smart textiles.	Remember
CO2	Explain the functions and applications of heat storage and thermo- regulated textiles.	Understand
CO3	Demonstrate the use of thermal sensitive materials in practical scenarios.	Apply
CO4	Differentiate between various wearable technologies and their specific purposes.	Analyse
CO5	Design a basic concept for a smart interactive garment for a given context.	Apply

1. Dr. Bharani Murugesan - bharanim@ksrct.ac.in

60 TT E 51	New Millennium Fibres	Category	L	T	Р	Credit
	New Millelillulli Fibres	PE	3	0	0	3

- Explore the evolution and current technologies of advanced fibers, including nanofibers and smart textiles.
- Examine production methods and innovations in fiber manufacturing.
- Assess the applications and properties of advanced fibers across various industries.
- Evaluate environmental impacts and promote sustainable practices in the fiber industry.
- Predict future developments and innovate within the field of fiber technology.

Pre-requisites

Fibre Science

Course Outcomes

On the Su	ccessial completion of the course, students will be able to	
CO1	Identify and describe various advanced fibers and their properties.	Analyse
CO2	Master current production technologies and methods for creating advanced fibers.	Analyse
CO3	Design and implement fiber-based solutions for practical applications.	Apply
CO4	Analyse and advocate for sustainability in fiber production and use.	Analyse
CO5	Innovate and adapt to future trends in fiber technology.	Analyse

Textile Chemical Processing II

Course Outcomes

CO1	Enumerate the apparel pre-treatment processing and factors influencing creases and chafe marks.	Understand
CO2	Describe the various quality controls in garment accessories and stitching.	Understand
CO3	Analyse the various apparel dyeing and printing machines working principles and applications.	Analyse
CO4	Explain the various apparel finishing methods, classification of stains and stain removers.	Understand
CO5	Describe about system of care labels, laundering procedures and Dry cleaning operations and its materials.	Understand

60 TT E 52	Sustainable Textiles and Apparels	Category	L	Т	Р	Credit
60 TT E 53	Sustainable Textiles and Appareis	PE	3	0	0	3

- To get knowledge on Sustainable process
- To aware the supply chain of textiles
- To analyse the ecological parameters in textile industry
- To understand the reasons of carbon footprint and its causes
- To identify the sustainable fashion trends

Pre-requisites

Technical Textile I & II

Course Outcomes

systems

On the	successful completion of the course, students will be able to										
CO1	Describe the life cycle assessment of textiles	Understand									
CO2	Describe the life cycle assessment of textiles	Understand									
CO3	Analyse the carbon foot print and its impact on environment	Understand									
CO4	Evaluate the life cycle impacts, modeling of life cycle impacts	Understand									
CO5	Apply the standards of environmental footprints of various packaging	Understand

60 TT E 54	Lean and Six Sigma concepts for	Category	٦	Т	P	Credit
	Textiles and Apparel Industry	PE	3	0	0	3

- To teach the concepts of Lean Manufacturing and six sigma.
- To provide knowledge on the implementation procedure for lean six sigma.
- To give an overview on various techniques of lean manufacturing.
- To inculcate the concepts of inventory control.
- To taught the implementation of lean techniques with various case studies

Pre-requisites

Garment Manufacturing Technology II

Course Outcomes

CO1	Explain the concepts, features and elements of lean manufacturing and six sigma.	Understand
CO2	Summarize the evolution, principles and scope of lean six sigma.	Remember
CO3	List out the techniques, approaches and production process for lean manufacturing	Understand
CO4	Discuss the concepts of Kanban, Kaizen, VSM and JIT in inventory control	Remember
CO5	Categorize the concepts of 5S, TPM and Implementation of lean techniques	Understand

5.7	Difficulties in implementation	1
5.8	Lean Implementation case study in Textile Industries	1

Course Designer(s)
1. Mr.G.Devanand - devanandg@ksrct.ac.in

60 TT E 55	Toytila Compositos	Category	L	T	Р	Credit
60 11 E 33	Textile Composites	PE	2	0	2	3

- Understand the fundamental properties and classifications of fiber-reinforced polymers, resins, and composite materials.
- Explore manufacturing techniques of prepregs and preforms, focusing on textile preforms and their geometric aspects.
- Learn various manufacturing processes of composites, including open and closed mould processes and continuous processes for metal and ceramic matrix composites.
- Examine the mechanical properties of textile composites through testing for tensile, flexural, impact, interlaminar shear, and compression properties.
- Investigate the diverse applications of polymer composites in industries such as aerospace, construction, sports, electrical, biomedical, and vibration damping

Pre-requisites

Nonwoven Technology

Course Outcomes

CO1	Recognize about composite materials their classifications and properties	Understand
CO2	Identify the manufacturing techniques for prepregs and preforms,	Understand
CO3	Show expertise in composite manufacturing processes,	Analyse
CO4	Evaluate mechanical properties of textile composites through testing	Apply
CO5	Apply knowledge of polymer composites by highlighting their versatile utility	Apply

60 TT E 56	Apparel Marketing and	Category	L	T	Р	Credit
	Merchandising	PE	3	0	0	3

- To impart the knowledge of apparel marketing.
- To know the importance of apparel marketing strategies
- To understand the functions of apparel merchandising
- To learn the various process in apparel merchandising
- To communicate the knowledge of sourcing

Pre-requisites

• Garment Manufacturing Technology II

Course Outcomes

	,	
CO1	Interpret the basic functions of apparel marketing, concepts of marketing and buying behaviour.	Understand
CO2	Summarize the marketing strategy, new product development and various types of advertising.	Understand
CO3	Indicate the roles & responsibilities of a merchandiser and purpose of visual merchandising	Understand
CO4	Analyse the process flow in merchandising and prepare the time and action calendar.	Analyse
CO5	Classify the need for sourcing, material resource planning and sourcing strategies.	Understand

60 TT E 57	Fashion Design: Process,	Category	L	T	Р	Credit
00 11 E 3/	Innovation and Practice	PE	3	0	0	3

- To understand the sourcing ideas and formulation of design.
- To learn the concepts of boards and methods of display.
- To gain knowledge about the fabric sourcing and pattern development.
- To familiar with the functions of Pattern adaptation and prototype preparation.
- To understand the garment finishing process and portfolio preparation.

Pre-requisites

• Fashion Design – Principles & Silhouttes

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Learn sourcing ideas and formulation of design.	Understand
CO2	Summarize the procedure for mood and story boards.	Understand
CO3	Gain knowledge on fabric sourcing and pattern construction.	Understand
CO4	Outline the procedure for prototype preparation	Understand
CO5	Express the requirement of portfolio presentation.	Apply

2.	60 CG 0P6	Internship	3	100	-	100	-	100	

^{*}CA evaluation pattern will differ from course to course and for different tests. This will have to be declared in advance to students. The department will put a process in place to ensure that the actual test paper follow the declared pattern.

^{**}End semester Examination will be conducted for maximum marks of 100 and subsequently be reduced to 40 marks for project End semester Examination

60 TT 8P1	PROJECT WORK	Category	L	T	Р	Credit
00 11 0F1	PHASE II	CG		-	16	8

• To make the student understand the practical problem solving process in the industry

Pre-requisites

• Nil

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Identify engineering problems relevant to the domain and collect literature survey for its support	Analyse
CO2	Analyse and identify an appropriate technique to solve the problem	Analyse
CO3	Do experimentation / fabrication, collect and interpret the data obtained	Apply
CO4	Document, prepare the project report and do the presentation	Apply
CO5	Demonstrate their responsibility as an individual and a leader in group project work	Apply

60 TT 8P1 - Project Work Phase II										
Semester	Hours/Week			Total	Credit	Maximum Marks				
Semester	L	Т	Р	Hrs	С	CA	ES	Total		
VIII										

The student can undertake the project work individually or in a group not exceeding three students.

The work has to be carried out in the college / institute. The works to be undertaken during this phase II is given below:

- I. Demonstrate and present their entire project work with results and discussions in Review 0
- II. Submit first draft of research paper/patent/demo the mobile app development in Review I
- III. Show the evidence of paper submission in journal / filed a patent / demo in the play store for mobile app development in Review II
- IV. Complete project report, paper publication in journals / status of patent / Availability of app in play store in Review III
- V. Complete all works before the last instruction day of that particular semester

S. No.	Торіс	No. of hours
1.0	Basics of Fibre Science and Spinning	
1.1	Introduction to textile fibers: Definition, classification, and essential properties.	1
1.2	Sequence of machineries in short staple yarn spinning from ginning to cone winding.	1
1.3	Detailed study of each machinery involved in spinning - Objectives and functioning.	1
1.4	Yarn numbering systems - Direct and indirect systems.	1
1.5	Essential yarn properties - Strength, elasticity, fineness.	1
1.6	Continuation of yarn properties - Evenness, hairiness, and twist.	1
	Hands-on demonstration or virtual demonstration of spinning machineries.	1
	Summary, revision, and quiz/assignment discussion.	2
2.0	Basics of Woven Fabric Production	
2.1	Introduction to woven fabric - Warp, weft, and basic weaving concepts.	1
2.2	Classification of looms - Handloom, power loom, automatic, shuttleless, and special types.	2
2.3	Preparatory machines for weaving - Objectives and their roles.	2
2.4	Primary weaving mechanisms - Shedding, picking, and beating-up.	1
2.5	Secondary and auxiliary weaving mechanisms - Take-up, let-off, warp stop motion, and weft stop motion.	2
2.6	Essential fabric properties - Strength, drape, and aesthetics.	1
3.0	Basics of Knitted and Non-Woven Fabric Production	
3.1	Introduction to knitting - Warp and weft knitting principles.	1
3.2	Classification of knitting machines - Circular, flatbed, and raschel knitting.	2
3.3	Properties of knitted fabrics - Stretch, comfort, and breathability.	1
3.4	Non-woven fabrics - Introduction, classification, and manufacturing principles.	1
3.5	Types of non-woven fabrics - Spunbond, meltblown, needle-punched.	2
3.6	End uses of non-woven fabrics - Medical, automotive, and filtration.	1
3.7	Summary, revision, and quiz/assignment discussion.	1
4.0	Basics of Chemical Processing	
4.1	Objectives of chemical processing - Singeing, de-sizing, scouring.	1
4.2	Detailed process of bleaching and mercerization.	2
4.3	Dyeing - Classification of dyes, methods, and types.	1
4.4	Techniques and equipment used in the dyeing process.	2
4.5	Introduction to textile printing - Types, styles, and techniques (Block, screen, rotary, transfer).	2
4.6	Summary, revision, and discussion on SDG 6 - Water management in textile processing.	1
5.0	Basics of Garment Manufacturing	
5.1	Introduction to garment manufacturing - Fabric sourcing, principles of pattern making.	1
5.2	Marker planning, laying, and cutting processes.	1
5.3	Sorting, sewing, and finishing operations.	1
5.4	Garment packing and quality control - Standards and best practices.	2
5.5	Pattern grading techniques - Basic principles and applications.	2
5.6	Summary, revision, and final quiz/assignment on Garment Manufacturing.	2

60 TT L 03	Introduction to Fashion Design	Category	L	T	Р	Credit
		OE	3	0	0	3

- Study the history and theories of fashion movement and fashion cycle
- Learn the significance of clothing in different cultural and social contexts
- Apply knowledge of fashion and clothing in personal wardrobe planning
- · Utilize elements and principles of design in creating aesthetically pleasing outfits
- Develop skills in portfolio presentation and organizing fashion shows

Pre-requisites

Basic knowledge about woven and knitted fabrics

Course Outcomes

On the successful completion of the course, students will be able to

CO1	Analyse reasons for changes in fashion, classifying styles, trends, and fads	Analyse
CO2	Understand the cultural aspects and societal roles of clothing	Understand
CO3	Develop skills in selecting appropriate clothing for different age groups and occasions	Understand
CO4	Mastery of Design Elements and Principles	Understand
CO5	Create designer boards: Develop fashion illustration skills and portfolio presentation	Apply

	Industrial Textiles	Category	L	Т	Р	Credit
60 TT L04	Industrial Textiles	OE	3	0	0	3

- To impart the knowledge on various fibers used in Industrial textile
- To impart the knowledge on medical textiles
- Understand the basic knowledge on geo and agro textiles
- To impart the knowledge on protective and smart textiles
- Understand the industrial application of textiles

Pre-requisites

• Nil

Course Outcomes

CO1	Explain the scope, classification & application of industrial textiles	Understand
CO2	Conclude the role of textile materials in the medical textile's product development.	Remember
СОЗ	Describe the properties required to use in Agro textiles & Geo textiles and the application of Geo & Agro textiles.	Understand
CO4	Summarize the functions & applications of protective & smart textiles.	Remember
CO5	Outline the miscellaneous & Industrial applications of textile products	Apply

^{*}SDG 9: Innovations Industry And Infrastructure

		No. of
S. No.	Topic	hours
1.0	Industrial Textiles	•
1.1	Introduction to Industrial Textiles: Definition and Scope.	1
1.2	Classification and Applications of Industrial Textiles.	1
1.3	Conventional Fibres used in Industrial Textiles.	1
1.4	High-Performance Fibres in Industrial Textiles.	1
1.5	Ultrafine and Novelty Fibres in Industrial Textiles.	2
1.6	Summary and revision of Industrial Textiles.	2
1.7	Quiz/Assignment discussion on Industrial Textiles.	1
2	Medical Textiles	1
2.1	Introduction to Medical Textiles and Materials used.	2
2.2	Requirements for Materials used in Medical Textiles.	1
2.3	Classification of Medical Textiles: Textiles for Implantations.	2
2.4	Non-implantation Textiles and Extra-corporeal Devices.	1
2.5	Healthcare & Hygiene Products in Medical Textiles.	2
2.6	Summary and revision of Medical Textiles.	1
3.0	Geo & Agro Textiles	•
3.1	Introduction to Geo Textiles: Definition and Scope.	1
3.2	Classification of Geosynthetics and Fibre Selection.	2
3.3	Functions and Engineering Properties of Geotextiles.	1
3.4	Geotextile Structure and Applications of Natural Geotextiles.	1
3.5	Introduction to Agro Textiles and Fibre Properties.	1
3.6	Applications of Agro Textiles in Agriculture.	3
4.0	Protective & Smart Textiles	<u> </u>
4.1	Introduction to Protective Textiles: Selection of Materials.	1
4.2	Fibres and Fabrics for Protective Textiles.	1
4.3	Textiles for Environmental Protection and Thermal Insulation.	1
4.4	Cold Weather Clothing and Nuclear Protective Fabrics.	2
4.5	Introduction to Smart Textiles: Role of Smart Materials.	2
4.6	Shape Memory Fibres and Shape Memory Materials in Textiles.	2
5.0	Industrial Applications of Textiles	
5.1	Textiles in Electronics and Automotives.	1
5.2	Textile Reinforcement Products.	2
5.3	Textiles for Banners, Flags, and Canvas Covers.	1
5.4	Ropes, Nets, and Tarpaulins.	1
5.5	Home and Office Furnishings.	2
5.6	Textiles in Sportswear – Athleisure Wear.	2
